|      |   | Unit I                        |                              | <u> </u> |  |
| 1    | Chapter 1: Constants, Variable  | es and Data Types             |                              | 3 Hrs    |  |
|      | Character set, C tokens, keywords & identifiers, structure of C program, executing a C program. Constants, variables, data types, declaration of variables, declaration of storage classes, assigning values to variables defining symbolic constants, declaring a variable as constant, declaring a variable as volatile, overflow and underflow of data |                               |                              |          |  |
| 2    | 2 Chapter 2: Operators and Expressions  |                               |                              |          |  |
|      | Arithmetic operators, relational  | operators, logical operators, | , assignment operator,       |          |  |
|      | increment and decrement opera   | tor, conditional operator, bi | twise operators, comma       |          |  |
|      | operator, special operators, arit   | hmetic expressions, evalua    | tion of expressions,         |          |  |
|      | precedence of arithmetic opera  |                               | expressions, operator        |          |  |
|      | precedence and associativity, m   |                               |                              | <u> </u> |  |
| 3    | Chapter 3: Managing Input and   |                               |                              | 3 Hrs    |  |
|      | The scanf() & printf() functions for  |                               |                              |          |  |
|      | writing a character, (the getchar   |                               |                              |          |  |
| 4    | formatted input and output using  |                               |                              | 3 Hrs    |  |
| -    | Chapter 4 : Control Statements  |                               | if else statement nesting of | 5 115    |  |
|      | Decision making with if statement, simple if statement nt, the ifelse statement, nesting of ifelse statements, the elseif ladder, the switch statement, the ? : operator, the goto statement, the break statement, programming examples   |                               |                              |          |  |
| 5    | Chapter 5 : Loop Control Structures 4   |                               |                              |          |  |
|      | The while statement, the dowhile statement, the for statement, nested loops, jumps in loops, the continue statement, programming examples.  |                               |                              |          |  |
|      |   | Unit II                       |                              |          |  |
| 6    | Chapter 6 : Arrays  |                               |                              | 3 Hrs    |  |
|      | The meaning of an array, one dimensional and two dimensional arrays, declaration and  |                               |                              |          |  |
|      | initialization of arrays, reading, writing and manipulation of above types of arrays,   |                               |                              |          |  |

|    | multidimonsional arrays, dynamic arrays, programming oxamples   |       |
|----|---|-------|
| -  | multidimensional arrays, dynamic arrays, programming examples<br>Chapter 7 : Character Arrays and Strings   | 2.11  |
| 7  | Declaring and initialing string variables, reading string from terminal, writing string to  | 3 Hrs |
|    | screen, arithmetic operations on characters, putting strings together, comparison of two  |       |
|    | strings, string handling functions, table of strings, other features of strings, programming  |       |
|    | examples  |       |
| 8  | Chapter 8 : User Defined Functions  | 4 Hrs |
|    | Need for user defined functions, a multi function program, elements of User defined functions, defining functions, return values and their types, function calls, function  |       |
|    | declaration, category of functions, no arguments and no return values, arguments but no   |       |
|    | return values, arguments with return values, no arguments with return value, functions  |       |
|    | that return multiple values, nesting of functions, recursion, passing arrays to functions,  |       |
|    | passing string to functions, programming examples   |       |
| 9  | Chapter 9 : Structures and Unions   | 3 Hrs |
|    | Defining a structure, declaring structure variables, accessing structure members, structure initialization, copying and comparing structure variables, operations on individual members, array of structures, structures within structures, structures and functions, Unions, size of structures, bit fields, programming examples  |       |
| 10 | Chapter 10: Pointers  | 3 Hrs |
|    | Understanding pointers, accessing the address space of a variable, declaring and initialization pointer variables, accessing a variable through its pointer, chain of pointers, pointer expressions, pointers and arrays, pointer and character strings, array of pointers, pointer as function arguments, functions returning po inters, pointers to functions, pointers and structures, programming examples  |       |
|    | Unit – III  |       |
| 11 | Chapter 11: File Management in C, Dynamic Memory Allocation, The Preprocessor   | 5 Hrs |
|    | Defining and opening a file, closing a file, input/output operations on files, error handling during I/O operations, random access files, command line arguments, programming examples. Dynamic memory allocation, allocating a block of memory: malloc, allocating multiple blocks of memory: calloc, releasing the used space: Free, altering the size of a block: realloc, programming examples. Introduction, macro substitution, files inclusion, compiler control directives, ANSI additions, programming exercises |       |
| 12 | Chapter 12:Basic Concepts of Parallel Programming   | 5 Hrs |
|    | Motivating parallelism, Scope for parallel computing, Thread basics, Why threads?<br>OpenMP: A standard for directive – based parallel programming, The OpenMP<br>programming model, Specifying concurrent tasks in OpenMP, Synchronization constructs<br>in OpenMP, Data handling in OpenMP, OpenMP library functions, Environment variables<br>in OpenMP.   |       |

# Theme: "Development of Rich Internet Applications using Client and Server side Technology"

Rich Internet Applications engage users in ways never before imagined in technology. The advancement of technologies like XML, Windows Presentation Foundation (WPF), Adobe's Flash, and HTML5 has allowed for products to bring experiences to consumers that not only engage and inspire but also creates user interaction that simplifies technology use. Companies, whether in the consumer space or enterprise, can harness the power of what Rich Internet Applications offer by transforming traditionally static experiences into fluid, animated, and engaging applications.

# **Purpose:**

- Developing rich reporting and analytics interfaces for enterprise-level information presentation.
- Developing cutting edge mobile applications that can be ported to multiple smart-phones without having to re-develop the application for each device.
- Developing animated experiences for consumers on the web.
- Cost-effectively modernizing existing application to appeal to new users.

# **Evaluation:**

# Students Assessment through CIE (80%) + SEE (20%)

# 1 Chapter No. 1. The Philosophy of .NET

Understanding the Previous State of Affairs, The .NET Solution, Introducing the Building Blocks of the .NET Platform (CLR,CTS, and CLS), The Role of the .NET Base Class Libraries, What C# Brings to the Table, An Overview of .NET Assemblies, The Role of the Common Intermediate Language, The Role of .NET Type Metadata, The Role of the Assembly Manifest, Compiling CIL to Platform –Specific Instructions, Understanding the Common Type System, Intrinsic CTS Data Types, Understanding the Common Languages Specification, Understanding the Common Language Runtime, The Assembly/Namespace/Type Distinction, Using ildasm.exe, Deploying the .NET Runtime, The Platform independent nature of .NET, Installing the .NET Framework, C# Command-Line Compiler, Building C# Applications using csc.exe, Working with csc.exe Response Files.

# 2 Chapter No. 2.C# Language Fundamentals.

The Anatomy of a Simple C# Class, An Interesting Aside : The System.Environment Class, Defining Classes and Creating objects, The System.Console Class, Establishing Member Visibility, Default Values of Class Member Variables, Member Variable Initialization Syntax, Defining Constant Data, Defining Read-only fields, Understanding the static keyword, Method Parameter Modifiers, Iteration Constructs, Decision Constructs and the Relational/Equality Operators, Understanding Value Types and Reference Types, Understanding Boxing and Unboxing Operations, Working with .NET Enumerations, The Master Class: System.Object, Overridding some default behaviours of System.Object, The System Data types( and C# Shorthand notation), The System.String data types, The role of System.Text.StringBuilder, .NET Array Types, Understanding C# Nullable Types, Defining Custom Namespaces

# 3 Chapter No. 3. Object-Oriented Programming with C#

Understanding the C# Class Type, Reviewing the Pillars of OOP, The First Pillar: C#'s Encapsulation Services, The Second Pillar: C#'s Inheritance Support, Programming for Containment/Delegation, The Third Pillar: C #'s Polymorphic Support, C# Casting rules, Understanding C# Partial types, Documenting C# Source Code via XML

# Unit II

# 4 Chapter No. 4. Object Lifetime and Exceptions Handling.

Classes, Objects and References, the basics of Object Lifetime, The role of Application Roots, Understanding Object Generations, System.GC type, Building Finalizable Objects, Building Disposable Objects, Building Finalizable and Disposable types. Ode to Errors, Bugs, and Exceptions, The Role of .NET Exception Handing, The Simplest possible example, Configuring the state of an exception, System – Level Exception (System. System Exception), Application-Level Exception (System.ApplicationException), Processing Multiple Exception, The Finally Block, The result of unhandled exceptions, Debugging Unhandled exceptions using VS. NET.

5 Chapter No. 5.Interfaces and Collections Defining Interfaces in C#, Implementing an Interface in C#, Contrasting Interfaces to Abstract Base Classes, Invoking Interface Members at the Object Level, Interfaces As

# Theme: "Mini project Using Java"

Java is one of the fundamental programming languages that can be used in many applications as well as product developments. The simple reason for this is because Java can be put to use in various platforms due to its multi-platform nature. Java is one of the favorite choices for developers for many reasons like security, object oriented(reusability), cross platform computing, multithreaded capability, Rich API, Powerful development tools ,availability of various frameworks, Great collection of open source libraries, wonderful community support, Excellent documentation support. Support for various databases and many more.

Students can use the following tools in web and mobile applications as well as product developments:

- ✓ Struts, Spring, Hibernate and JPA
- ✓ JAXB and Apache Axis 2/Java
- ✓ JSP, Servlets, JDBC, EJB, JMS, JTA and JUnit
- ✓ Apache Tomcat, JBoss and GlassFish
- ✓ JavaScript, JSF, GWT and jQuery
- ✓ Eclipse, Netbeans and JBoss tools
- ✓ TestNG
- ✓ jBPM and Drools
- ✓ JCR

### **Objectives:**

Help students to utilize and strengthen the knowledge of java which they have learnt in previous semester.

Methodology:

Students are asked to make a team of 3-4 members and can choose the different categories of projects

like desktop applications, web applications, mobile application and distributed application and work once it is approved by the coordinator.

# Assessment:

Students Assessment through CIE (80%) + SEE (20%)

| Continuous   | Assessment                              |       | Marks |
|--------------|---|-------|-------|
| Internal     |   |       |       |
| Evaluation   | Problem Definition, Literature Review   |       | 10    |
|              | Synopsis and SRS Deliverables           |       | 10    |
|              | Design (Module wise algorithmic design) |       | 20    |

|              | Report                                  |       | 10    |
|              | Presentation skills and Viva-voce       |       | 10    |
|              |   | Total | 80    |
| Semester End | Presentation                            |       | 10    |
| Examination  | Viva-voce                               |       | 10    |
|              |   | Total | 100   |

### Course Objectives:

The Mini Project being part of the course work is not only a mechanism to demonstrate the abilities and specialization but also provides the opportunity to demonstrate originality, teamwork, inspiration, planning and organization in a software project. One can put into practice the techniques that have been taught throughout the previous courses. Mini-projects develop practical skills in students. The idea is to propose a problem that one might encounter in future career (be it in academia, industry, or government). Then propose a solution and implement it.

# Theme: Java Based E-Commerce Applications with Multilingual Support

# **E-commerce Objectives:**

Most business houses are shifting their operations to the online world. Right from buying apparels to computers to booking tickets and renting out apartments, everything can be done through the Internet now. It is a win-win formula for both the customers and the business houses. Digital India aims to boost E-business and the E-commerce industry with the vision that it would in turn boost the economy is a whole.

# **Multilingual Objectives:**

Language is an essential driver of enterprise growth. The user interface is the key component of any application that needs to support various language speaking audiences. Making an app that appeals to and is available for more users broadens the market and brings more revenue in the app sales and there will be more exposure to the business.

# Evaluation:

• The project assessment is done by an evaluation team as per the schedule.

Guidelines for In Semester Assessment (ISA) Scheme

| COUF                                     | WEB CONTENT MANAGEMENT SYSTEM – COURSE PROJECT<br>RSE DESCRIPTION:  |   |  |  |
| dynai<br>a site<br>most<br><b>Drup</b> a | y, many web publishers use content management systems (CMS) to allow them to instant<br>mically update web pages and properties as new content becomes available so that every<br>is engaging, informative, and meaningful. The course project shall explore any one of the<br>popular open source web-based content management systems— <b>WordPress, Joomla</b><br><b>al</b> —to create dynamic and flexible websites and landing pages. Students shall explore<br>mentals of planning dynamic websites, CMS database management, developing CSS-cont<br>emplates, and creating database-driven websites through the planning and creation of the | visit to<br>three<br><b>a, and</b><br>re the<br>trolled |  |  |

- Introduce learners to any one of the three most popular open source content management systems (CMS) such as WordPress, Drupal, or Joomla.
- Create, deploy and Maintain websites using CMS, including creating and editing content, adding functionality, and creating custom templates and themes.

# COURSE PROJECT TITLE: BUILDING WEBSITE USING CMS (JOOMLA / WORDPRESS OR DRUPAL)

To build website for any real world examples such as Corporate web sites or portals, Online magazines, newspapers, and publications, E-commerce and online reservations, Government applications, Small business web sites, Community-based portals, School, religious web sites or Personal or family homepages using popular Web Content Management System. The website shall facilitate to create, manage, store and deploy content on the Web, including text, graphics, video or audio as a part of Enterprise Content Management.

### **EXECUTION PLAN:**

| Sl.No | Demonstration  | Implementation  | Number<br>of Slots |
|-------|--|---|--------------------|

| 1.<br>2.<br>3.<br>COUR | Anita Sengar "IT Infrastructure Management" 2012 Edition, publisher: S K Kataria and S  |          |

IT infrastructure consists of a set of physical devices and software applications that are required to operate the entire enterprise. IT infrastructure is also consists both human and technical capabilities. These services include the following- Computing platforms used to provide computing services, that connect employees, customers, and suppliers into a coherent digital environment, including servers ,Data management services that store and manage corporate data and provide capabilities for analyzing the data and Application software services that provide enterprise-wide capabilities such as enterprise resource planning, customer relationship management, supply chain management, and knowledge management systems that are shared by all business units. It allows an organization to deliver IT solutions and services to its employees, partners and/or customers and is usually internal to an organization and deployed within owned facilities.

# OBJECTIVES

- Acquire comprehensive knowledge, technical expertise and hands-on experience in IT Infrastructure Management
- To learn all aspects of IMS such as Networking, Operating Systems, Virtualizations and Data Center technologies.

# LAB REQUIREMENTS:

- A modern web-browser with HTML5 and JavaScript enabled.
- Remote Desktop Client connection software.
- Internet connectivity Microsoft Account (LiveID).

### Text Book:

- 1. "Professional NoSQL" by Shashank Tiwari, 2011, WROX Press (Chapter 1,2,3,4,5,6,7.8.9,10.11.12.13.15)
- 2. The Definitive guide to MongoDB, The NoSQL Database for Cloud and Desktop Computing, Apress 2010. (Chapter 6,7,8,9).

# **NOSQL PRACTICES**

# **COURSE DESCRIPTION:**

The widespread emergence of big data storage needs has driven the development and adoption of a new class of non - relational databases commonly referred to as NoSQL databases. The NoSQL (or Not-Only SQL) databases are basically developed to meet the requirements of the modern cloud-based decentralized apps and are a good solution as compared to the relational databases in many ways. These unstructured databases are widely known for their non-relational and schema less data model, improved performance and scalability factors which are always an issue with relational database systems. This course will explore the origins of NoSQL databases and the characteristics that distinguish them from traditional relational database management systems. Core concepts of NoSQL databases will be presented followed by an exploration of how different database technologies implement these core concepts.

# OBJECTIVES

- o Demonstrate competency in designing NoSQL database management systems.
- Demonstrate competency in describing how NoSQL databases differ from relational databases from a theoretical perspective.
- Demonstrate competency in selecting a particular NoSQL database for specific use cases.

# LAB REQUIREMENTS:

- o Computer with latest configuration having Windows and Unix OS Versions.
- Java software installed.

# **Mobile Application Development Course Project**

### **Objective:**

This is the course Project for the Mobile App Development. The students will be divided into project teams, and each team will develop a marketable mobile app. ideally, each project team will have 2 or 3 students with a maximum of 4. The goals are to expose students to the process of developing a new mobile app from start to finish and to provide an experience very similar to what a developer would have at any company where they work to produce an app that not only works but is also something that meets the needs of their clients.

# Concepts:

Mobile app development, project management, and quality assurance.

# **Required Textbooks**

AnubhavPradhan, Anil V Deshpande, Composing Mobile Apps using Android, 2010 wiley, 2010.

Theme: "Development of Applications using .NET/ JavaTechnology"

# .NET Technology

The Microsoft .NET framework has major advantages over previous programming languages and environments. Applications written in .NET may be in any of several different programming languages (languageinteroperability). .NET consists of a re-useable library of classes (smallcomponents that help developers create applications). It also consists of a development environment to help developers rapidly and graphically build applications. All operating system functions can be encapsulated within .NET.The framework manages the execution of applications and Web services, and provides many functionalities including security enforcement and memory management. Because of these advantages, corporations and industry are beginning to embrace .NET. They will need graduates whoknow how to use it.Hence, a project done using this technology would give an insight of the powerful features of .NET and help the students to find a job in this field. Below is a list of some of the types of applications that can be created using the .NET platform.

- Customer relationship management
- Accounting applications
- Product/inventory applications
- Warehousing applications using hand-held devices
- Web sites
- Value chain/supply management
- Integration with partners through the Internet
- XML Web services
- PDA (hand-held) applications

# **Objectives of using .NET Technology-**

Student doing a project in .NET technology should be able to:

- 1. Develop an application that is pure OOP, platform independent, language independent and interoperable.
- 2. Use the features of .NET to make the application scalable, maintainable, easily deployable, reliable and secure.
- 3. Work with databases using ADO.NET.
- 4. Develop background processes windows services.
- 5. Create animations using .NET's WPF.
- 6. Create and use Web Services through SOA.

# Java Technology

Java is one of the fundamental programming languages that can be used in many applications as well as product developments. The simple reason for this is because Java can be put to use in various platforms due to its multi-platform nature. Java is one of the favorite choices for developers for many reasons like security, object oriented(reusability), cross platform computing, multithreaded capability, Rich API, Powerful development tools ,availability of various frameworks, Great collection of open source libraries, wonderful community support, Excellent documentation support. Support for various databases and many more.

Students can use the following tools in web and mobile applications as well as product developments:

- ✓ Struts, Spring, Hibernate and JPA
- ✓ JAXB and Apache Axis 2/Java
- ✓ JSP, Servlets, JDBC, EJB, JMS, JTA and JUnit
- ✓ Apache Tomcat, JBoss and GlassFish
- ✓ JavaScript, JSF, GWT and jQuery
- ✓ Eclipse, Netbeans and JBoss tools
- ✓ Intervalue 
  ✓ Intervalue
- ✓ ☑jBPM and Drools
- ✓ JCR

# Objectives:

Help students to utilize and strengthen the knowledge of Java which they have learnt in previous semester.

# Methodology:

Students are asked to make a team of 3-4 members and can choose the different categories of projects like desktop applications, web applications, mobile application and distributed application and work once it is approved by the coordinator.

#### **Evaluation:**

Students Assessment through CIE (80%) + SEE (20%)

| Continuous<br>Internal | Assessment                              | Marks |
|------------------------|---|-------|
| Evaluation             | Problem Definition, Literature Review   | 10    |
|                        | Synopsis and SRS Deliverables           | 10    |

for opening a new outlet. The chain already has trucks in various cities and you have data for profits and populations from the cities.

- 2) Build a logistic regression model to predict whether a student gets admitted to a university. Suppose that you are the administrator of a university department and you want to determine each applicant's chance of admission based on their results on two exams.
- 3) Implement one-vs-all logistic regression and neural networks to automate handwritten digit recognition (0 to 9)
- 4) Implement the backpropagation algorithm for neural networks and apply it to task of hand –written digit recognition.
- 5) Build a Spam Classifier using Support Vector Machines.
- 6) Implement the K-means clustering algorithm and apply it to compress an image.
- 7) Build Principle Component analysis to find a low dimensional representation of face images.
- 8) Implement the anomaly detection algorithm and apply it to detect failing servers on a network.
- 9) Build a recommender system for movies by using collaborative filtering.

| Teaching Hrs: 48       |                              | Exam Duration: 3 Hours |
|                        |                              |                        |

#### **Project Theme: "Software Design & Development"**

#### **Objectives:**

#### At the end of the course student will be able to:

- 1. Carry-out the survey of the given or real world problem and prepare the SRS as per the industry standard (IEEE-ISO).
- 2. Work effectively and collectively in a team.
- 3. Identify various components; design the suitable architecture for the system by applying knowledge of Object Oriented Design.

# 4. Use CASE tools to design various models required for the given problem.

| Expt./Job<br>No. | Brief description about the experiment/job | Lab Slots per batch<br>(1Labslot=3Hrs.) |

### **Objectives :**

- To develop a problem statement.
- Identify Use Cases and develop the Use Case model.
- Identify the business activities and develop an UML Activity diagram. 5. Identity the conceptual classes and develop a domain model with UML Class diagram.
- Using the identified scenarios find the interaction between objects and represent them using UML Interaction diagrams.
- Draw the State Chart diagram.
- Identify the User Interface, Domain objects, and Technical services. Draw the partial layered, logical architecture diagram with UML package diagram notation.
- Draw Component and Deployment diagrams.

Rafael.C.Gonzalez, Richard.E.Woods, Digital Image Processing, Pearson, 3<sup>rd</sup> Edition, 2008. 4. http://opencv-pythontutroals.readthedocs.io/en/latest/py\_tutorials/py\_imgproc/py\_table\_of\_contents\_imgproc/p y table of contents imgproc.html) **DIP Practices using Python COURSE DESCRIPTION:**

Computer vision is the automated extraction of information from images. Information can mean anything from 3D models, camera position, object detection and recognition to grouping and searching image content. This course provide hands-on programming practices and introduces basic tools for working with images using python OpenCV library.

# OBJECTIVES

- $\circ$   $\,$  To provide hands-on programming with images using Python.
- To demonstrate computer vision techniques behind a wide variety of real-world applications.
- o To implement many of the fundamental algorithms using OpenCV library.

# LAB REQUIREMENTS:

- $\circ$   $\;$  Computer with latest configuration having Windows and Linux OS Versions.
- Python with OpenCV Library installed.

| Expt./ | Lab  | Implementation   | Numbe |
|--------|--|--|-------|
| Jop    | assignments/   |  | of    |
| No.    | experiment   |  | Hours |
| 1.     | Changing<br>Colorspaces  | Learn to change images between different color spaces. Plus learn to track a colored object in a video.            | 1     |
| 2.     | Geometric<br>Transformatio<br>ns of Images :                           | Learn to apply different geometric transformations to images like rotation, translation etc.                       | 1     |
| 3.     | Image<br>Thresholding :  | Learn to convert images to binary images using global thresholding, Adaptive thresholding, Otsu's binarization etc | 1     |
| 4.     | Smoothing<br>Images:   | Learn to blur the images, filter the images with custom kernels etc  |       |
| 5.     | Morphological<br>Transformatio<br>ns                                   | Learn about morphological transformations like Erosion,<br>Dilation, Opening, Closing etc                          | 1     |
| 6.     | Image<br>Gradients :   | Learn to find image gradients, edges etc   |       |
| 7.     | Canny Edge<br>Detection:   | Learn to find edges with Canny Edge Detection  | 1     |
| 8.     | Image<br>Pyramids:   | Learn about image pyramids and how to use them for image blending  |       |
| 9.     | Contours in<br>OpenCV:   | All about Contours in OpenCV   | 1     |
| 10.    | Histograms in<br>OpenCV:   | All about histograms in OpenCV   |       |
| 11.    | Image<br>Transforms in<br>OpenCV:                                      | Meet different Image Transforms in OpenCV like Fourier<br>Transform, Cosine Transform etc.                         | 1     |
| 12.    | Template<br>Matching :   | Learn to search for an object in an image using Template<br>Matching   | 1     |
| 13.    | Hough Line<br>Transform :  | Learn to detect lines in an image  | 1     |
| 14.    | Hough Circle<br>Transform:   | Learn to detect circles in an image  |       |
| 15.    | Image<br>Segmentation<br>with<br>Watershed<br>Algorithm:               | Learn to segment images with watershed segmentation.   | 1     |
| 16.    | Interactive<br>Foreground<br>Extraction<br>using GrabCut<br>Algorithm: | Learn to extract foreground with GrabCut algorithm   | 1     |

#### Linux Administration Practices

# **COURSE DESCRIPTION:**

IT infrastructure consists of a set of physical devices and software applications that are required to operate the entire enterprise. IT infrastructure is also consists both human and technical capabilities. These services include the following- Computing platforms used to provide computing services, that connect employees, customers, and suppliers into a coherent digital environment, including servers ,Data management services that store and manage corporate data and provide capabilities for analyzing the data and Application software services that provide enterprise-wide capabilities such as enterprise resource planning, customer relationship management, supply chain management, and knowledge management systems that are shared by all business units. It allows an organization to deliver IT solutions and services to its employees, partners and/or customers and is usually internal to an organization and deployed within owned facilities.

#### OBJECTIVES

- Acquire comprehensive knowledge, technical expertise and hands-on experience in IT Infrastructure Management
- To learn all aspects of IMS such as Networking, Operating Systems, Virtualizations and Data Center technologies.

#### LAB REQUIREMENTS:

- A modern web-browser with HTML5 and JavaScript enabled.
- Remote Desktop Client connection software.
- Internet connectivity Microsoft Account (LiveID).

| Expt./<br>Job<br>No. | Lab assignments/experiment | Implementation  | Number<br>of Slots |
|----------------------|----------------------------|---|--------------------|
| 8.                   | Web Server                 | Apache Web Server, IIS Server: Install<br>and Configure the Apache Web Server<br>on Linux and IIS server on windows.                        | 01                 |
| 9.                   | Samba Server               | Implementation of Windows files and<br>print services for Linux allowing the<br>sharing of files and printers between<br>Windows and Linux. | 01                 |
| 10.                  | LDAP Server                | LDAP Server: Lightweight Directory<br>Access Protocol- Server Installation to<br>access a directory service.                                | 01                 |
| 11.                  | Mail Server                | Mail Server configuration- POP3<br>Server, IMAP Server  | 01                 |

# LIST OF EXERCISES

| 12. | Proxy Server   | Develop a small web proxy server,<br>which is able to cache web pages. It is<br>a very simple proxy server which only<br>understands simple GET-requests, but<br>is able to handle all kinds of objects -<br>not just HTML pages, but also images.   | 01 |
|-----|--|--|----|
| 13. | Firewalls and NAT (Network Address<br>Translation)   | Use of iptables to build a permissive<br>firewall by selectively filtering packets<br>based on protocol type.<br>To demonstrate how addresses may<br>be translated from private addresses<br>to public and vice versa as they pass in<br>and out of the firewall.  | 01 |
| 14. | Cloud Infrastructure: Azure Hands-<br>on Lab (HOL) Build your<br>Infrastructure in the Cloud using<br>Windows Azure Infrastructure<br>Services - | <ol> <li>6. Login to the Windows Azure<br/>Management Portal, Define a new<br/>Windows Azure Affinity Group and<br/>Create a new Windows Azure<br/>Storage Account.</li> <li>7. Register a DNS Server in Windows<br/>Azure.</li> <li>8. Define a Virtual Network in<br/>Windows Azure.</li> <li>9. Configure Windows Server Active<br/>Directory in a Windows Azure VM.</li> <li>10. Configure New Machine for<br/>File Services in a Windows Azure<br/>VM.</li> </ol> | 01 |

|   | data, a message must be displayed.   |    |  |  |  |
|---|--|----|--|--|--|
|   | <ul><li>b) Write a program containing the following controls:</li></ul>  |    |  |  |  |
|   | b) which a program containing the following controls.  |    |  |  |  |
|   | a. A List Box  |    |  |  |  |
|   | b. A Button  |    |  |  |  |
|   | c. An Image  |    |  |  |  |
|   | d. A Label   |    |  |  |  |
|   | The listbox is used to list items available in a store. When the user clicks on an item in the listbox, its image is displayed in the image control. When the user clicks the button, the cost of the selected item is displayed in the control.   |    |  |  |  |
| 6 | a) Write a program to get a user input such as the boiling point of water and test it to the appropriate value using Compare Validator.  |    |  |  |  |
|   | b) Declare one TextBox control, one Button control, one Label<br>control, and one RegularExpressionValidator control in an .aspx<br>file. The submit() function checks if the page is valid. If it is valid, it<br>returns "The page is valid!" in the Label control. If it is not valid, it<br>returns "The page is not valid!" in the Label control. If validation<br>fails, the text "The zip code must be 5 numeric digits!" will be<br>displayed in the RegularExpressionValidator control. |    |  |  |  |
| 7 | I. Create table CANDIDATE with the following   | 01 |  |  |  |
|   | Column     Datatype  |    |  |  |  |
|   | Ccode Int  |    |  |  |  |
|   | Name Char(20)  |    |  |  |  |
|   | DOJ Date   |    |  |  |  |
|   | i) Insert following records into the table:  |    |  |  |  |
|   | Code 1001 1002 1003  |    |  |  |  |
|   | Name S.Raman M.Sushil Mohanyes   |    |  |  |  |
|   | DOJ 12-Jun-97 12-Nov-97 30-Jul-97  |    |  |  |  |
|   | ii) Order the records on the basis of seniority of employees. iii) Drop the table.   |    |  |  |  |
| 8 | Write a Program in ASP that has a form taking the user's name as   | 01 |  |  |  |

| 11               | <ul> <li>ASP.NET, ADO.I</li> <li>It also contains a and a textarea in v</li> </ul> | NET, C#.<br>textbox in which the user has t<br>which the user has to enter his co                     | o enter a name<br>omments. When | 02                   |
|------------------|--|---|---------------------------------|----------------------|
|                  | in the textbox an  | ked, the output should display the display the user-selection from the displayed with the tracing for | listbox. All the                |                      |

Optional Features, Ruby: rest-open-uri and net/http, Python: httplib2, Java: C#: System.Web.HTTPWebRequest, PHP: HttpClient, libcurl, JavaScript: XMLHttpRequest, The Command Line: curl, Other Languages.Processing the Response: XML Parsers: Ruby: REXML, I Guess, Python: ElementTree, Java: javax.xml, Xerces, or XMLPull, C#: System.Xml.XmlReader , PHP, JavaScript: responseXML, Other Languages, JSON Parsers: Handling Serialized Data , Clients Made Easy with WADL 3 Chapter 3: What Makes RESTful Services Different? 4 Hrs Introducing the Simple Storage Service, Object-Oriented Design of S3, A Few Words About Buckets, A Few Words About Objects, What If S3 Was a Standalone Library? Resources, HTTP Response Codes, An S3 Client, The Bucket List : The Bucket, The S3 Object, Request Signing and Access Control: Signing a URI, Setting Access Policy: Using the S3 Client Library, Clients Made Transparent with ActiveResource : Creating a Simple Service, An ActiveResource Client, A Python Client for the Simple Service, Parting Words. **Chapter 4 : The Resource-Oriented Architecture** 4 4 Hrs Resource-Oriented What Now? What's a Resource? URIs: URIs Should Be Descriptive, The Relationship Between URIs and Resources : Addressability, Statelessness : Application State Versus Resource State, Representations: Deciding Between Representations, Links and Connectedness, The Uniform Interface: GET, PUT, and DELETE : HEAD and OPTIONS, POST: Creating subordinate resources, Appending to the resource state, Overloaded POST: The not-so-uniform interface, Safety and Idempotence, Safety: Idempotence, Why safety and idempotence matter Why the Uniform Interface Matters, That's It! 5 **Chapter 5 : Designing Read-Only Resource-Oriented Services** 4 Hrs Resource Design, Turning Requirements Into Read-Only Resources, Figure Out the Data Set, General Lessons, Split the Data Set into Resources, General Lessons, Name the Resources, Encode Hierarchy into Path Variables, No Hierarchy? Use Commas or Semicolons, Map URIs, Scale, Algorithmic Resource? Use Query Variables, URI Recap, Design Your Representations: The Representation Talks About the State of the Resource, The Representation Links to Other States, Representing the List of Planets, Representing Maps and Points on Maps, Representing the Map Tiles, Representing Planets and Other Places, Representing Lists of Search Results, Link the Resources to Each Other, The HTTP Response : What's Supposed to Happen? Conditional HTTP GET, What Might Go Wrong? Conclusion. Unit II 6 **Chapter 6 : Designing Read/Write Resource-Oriented Services** 4 Hrs User Accounts as Resources : Why Should User Accounts Be Resources? Authentication, Authorization, Privacy, and Trust, Turning Requirements into

Authentication, Authorization, Privacy, and Trust, Turning Requirements into Read/Write Resources, Figure Out the Data Set, Split the Data Set into Resources, Name the Resources with URIs, Expose a Subset of the Uniform Interface, Design the Representation(s) Accepted from the Client, Design the Representation(s) to Be

Served to the Client, Link This Resource to Existing Resources, What's Supposed to Happen? What Might Go Wrong? Custom Places : Figure Out the Data Set, Split the Data Set into Resources, Name the Resources with URIs, Expose a Subset of the Uniform Interface ,Design the Representation(s) Accepted from the Client, Design the Representation(s) Served to the Client, Link This Resource to Existing Resources, What's Supposed to Happen? What Might Go Wrong? A Look Back at the Map Service 7 **Chapter 7 : A Service Implementation :** 4 Hrs A Social Bookmarking Web Service, Figuring Out the Data Set, Resource Design: REST in Rails, The User Controller, The Bookmarks Controller, The User Tags Controller, The Calendar Controller, The URI Controller, The Recent Bookmarks Controller, The Bundles Controller, The Leftovers, Remodeling the REST Way, Implementation: The routes.rb File. Design the Representation(s) Accepted from the Client, Design the Representation(s) Served to the Client, Connect Resources to Each Other, What's Supposed to Happen? What Might Go Wrong? Controller Code : What Rails Doesn't Do:Conditional GET: param[:id] for things that aren't IDs, The Application Controller, The Users Controller The Bookmarks Controller, The Tags Controller, The Lesser Controllers, The Calendar Controller : The RecentController, The UrisController, Model Code: The User Model The Bookmark Model, What Does the Client Need to Know? Natural-Language Service Description, Description Through Standardization ,Hypermedia Descriptions **Chapter 8 : REST and ROA Best Practices** 8 4 Hrs Resource-Oriented Basics, The Generic ROA Procedure, Addressability : Representations Should Be Addressable : State and Statelessness: Connectedness, The Uniform Interface : Safety and Idempotence, New Resources: PUT Versus POSTOverloading POST, This Stuff Matters : Why Addressability Matters, Why Statelessness Matters, Why the Uniform Interface Matters, Why Connectedness Matters A terrifying example. Resource Design : Relationships Between Resources, Asynchronous Operations, Batch Operations, Transactions: When In Doubt, Make It a Resource, URI Design, Outgoing Representations, Incoming Representations, Service Versioning, Permanent URIs Versus Readable URIs, Standard Features of HTTP : Authentication and Authorization: Basic authentication, Digest authentication, WSSE username token : Compression, Conditional GET, Caching : Please cache Thank you for not caching, Default caching rules, Look-Before-You-Leap, Requests Partial GET : Faking PUT and DELETE, The Trouble with Cookies, Why Should a User Trust the HTTP Client?, Applications with a Web Interface, Applications with No Web Interface What Problem Does this Solve?

9 **Chapter 9 : The Building Blocks of Services** Representation Formats : XHTML, XHTML with Microformats, Atom, OpenSearch SVG, Form-Encoded Key-Value Pairs, JSON, RDF and RDFa,

|        | Framework-Specific Serialization Formats : Ad Hoc XHTML, Other XML Standards and   |           |  |  |  |  |  |
|--------|--|-----------|--|--|--|--|--|
|        | Ad Hoc Vocabularies, Encoding Issues, XML and HTTP: Battle of the encodings, The   |           |  |  |  |  |  |
|        | character encoding of a JSON document  |           |  |  |  |  |  |
|        | Prepackaged Control Flows: General Rules, Database-Backed Control Flow, GET, PUT,  |           |  |  |  |  |  |
|        | POST for creating a new resource, POST for appending to a resource, DELETE   |           |  |  |  |  |  |
|        | The Atom Publishing Protocol: Collections, Members, Service document, Category   |           |  |  |  |  |  |
|        | documents, Binary documents as APP members, GData: Querying collections, Data  |           |  |  |  |  |  |
|        | extensions, POST Once Exactly,   |           |  |  |  |  |  |
|        | Hypermedia Technologies : URI Templates, XHTML 4, XHTML 4 links, XHTML 4 forms,  |           |  |  |  |  |  |
|        | Shortcomings of XHTML 4, XHTML 5, WADL : Describing a del.icio.us resource,  |           |  |  |  |  |  |
|        | Describing an APP collection, Is WADL evil?  |           |  |  |  |  |  |
| 10     | Chapter 10 : The Resource-Oriented Architecture Versus Big Web Services<br>What Problems Are Big Web Services Trying to Solve? | 4 Hrs     |  |  |  |  |  |
|        | SOAP :The Resource-Oriented Alternative, WSDL: The Resource-Oriented Alternative,  |           |  |  |  |  |  |
|        | UDDI: The Resource-Oriented Alternative, WSDL: The Resource-Oriented Alternative,  |           |  |  |  |  |  |
|        | Alternative, Reliable Messaging : The Resource-Oriented Alternative, Transactions:   |           |  |  |  |  |  |
|        | The Resource-Oriented Alternative, BPEL, ESB, and SOA, Conclusion.   |           |  |  |  |  |  |
|        | The Resource-Oriented Alternative, BPEL, ESB, and SOA, Conclusion.   |           |  |  |  |  |  |
|        | Unit – III   |           |  |  |  |  |  |
| 11     | Chapter 11 : Ajax Applications as REST Clients   | 5 Hrs     |  |  |  |  |  |
| 11     | From AJAX to Ajax, The Ajax Architecture, A del.icio.us Example, The Advantages of   | 51115     |  |  |  |  |  |
|        | Ajax, The Disadvantages of Ajax, REST Goes Better, Making the Request, Handling the  |           |  |  |  |  |  |
|        | Response, JSON, Don't Bogart the Benefits of REST, Cross-Browser Issues and Ajax   |           |  |  |  |  |  |
|        | Libraries : Prototype, Dojo, Subverting the Browser Security Model, Request Proxying,  |           |  |  |  |  |  |
|        | JavaScript on Demand: Dynamically writing the script tag, Library support.   |           |  |  |  |  |  |
| 12     | Chapter 12 : Frameworks for RESTful Services   | 5 Hrs     |  |  |  |  |  |
|        | Ruby on Rails : Routing, Resources, Controllers, and Views, Outgoing Representations,  |           |  |  |  |  |  |
|        | Incoming Representations, Web Applications as Web Services, The Rails/ROA Design   |           |  |  |  |  |  |
|        | Procedure. Restlet: Basic Concepts: Writing Restlet Clients, Writing Restlet Services:   |           |  |  |  |  |  |
|        | Resource and URI design, Request handling and representations, Compiling, running,   |           |  |  |  |  |  |
|        | and testing, Conclusion. Django: Create the Data Model, Define Resources and Give  |           |  |  |  |  |  |
|        | Them URIs, Implement Resources as Django Views, The bookmark list view, The  |           |  |  |  |  |  |
|        | bookmark detail view: Further directions, Conclusion   |           |  |  |  |  |  |

|        | MEAN, Installing MongoDB, Installing Node.js, Introducing NPM.   |                |
|--------|--|----------------|
| 2<br>3 | Chapter 2 : Getting Started with Node.js<br>Introduction to Node.js, JavaScript closures, Node modules, Developing Node.js web<br>applications.<br>Chapter 3 : Building an Express Web Application   | 5 Hrs<br>6 Hrs |
|        | Introduction to Express, Installing Express, Creating your first Express application,<br>The application, request, and response objects, External middleware, Implementing<br>the MVC pattern, Configuring an Express application, Rendering views, Serving static<br>files, Configuring sessions. |                |
|        | Unit II  |                |
| 4      | Chapter 4 : Introduction to MongoDB  | 5 Hrs          |
|        | Introduction to NoSQL, Introducing MongoDB , Key features of MongoDB, MongoDB shell, MongoDB databases , MongoDB collections, MongoDB CRUD operations  |                |
| 5      | Chapter 5 : Introduction to Mongoose   | 6 Hrs          |
|        | Introducing Mongoose, Understanding Mongoose schemas, Extending your Mongoose schema, Defining custom model methods, Model validation, Using Mongoose middleware, Using Mongoose DBRef.  |                |
| 6      | Chapter 6 : Managing User Authentication Using Passport  | 6 Hrs          |
|        | Introducing Passport, Understanding Passport strategies, Understanding Passport  |                |
|        | OAuth strategies; Introduction to AngularJS:- Introducing AngularJS, Key concepts of   |                |
|        | AngularJS, Installing AngularJS, Structuring an AngularJS application, Bootstrapping your AngularJS application, AngularJS MVC entities  |                |
|        | Unit – III   |                |
| 7      | Chapter 7: Creating a MEAN CRUD Module   | 4 Hrs          |
|        | Introducing CRUD modules, Setting up the Express components, Introducing the ngResource module, Implementing the AngularJS MVC module, Finalizing your modu implementation.  |                |
| 8      | Chapter 8: Testing MEAN Applications   | 5 Hrs          |
|        | Introducing JavaScript testing, Testing your Express application, Testing your<br>AngularJS application; Adding Real-time Functionality Using Socket.io:- Introducing<br>WebSockets, Introducing Socket.io, Installing Socket.io, Building a Socket.io chat.                                       |                |

# Course Title: Block Chain Technologies

L-T-P: **3-0-1** 

Credits: **4** ESA Marks: **50**  Contact Hrs: 5

ISA Marks: 50

Total Marks: 1**00** 

| No | Content  |         |
|----|--|---------|
|    |  | Hrs     |
|    | Unit I   |         |
| 1  | Introduction   | 5 hrs   |
| -  | What blockchain is, What blockchain isn't, Blockchain definitions, How are blockchains different from databases? History of blockchain, Blockchain 2.0, The motivations behind blockchain, Characteristics of blockchain, Background of DLT, The different types of blockchain, Overview of blocks, Influence of Moore's law on blockchain technology. | 51115   |
| 2  | A Bit of Cryptography.   | 6 hrs   |
|    | Cryptography in blockchain, Classical cryptography, Cryptographic primitives,<br>Symmetric key cryptography, Asymmetric key cryptography, Elliptic-curve<br>cryptography, Digital signatures, Cryptographic hashing.   |         |
| 3  | Cryptography in Blockchain   | 6 hrs   |
|    | Hashing in blockchain, Linking blocks in a blockchain, Linking blocks using an SHA256 hashing algorithm, Block structure, Blockchain functionality, Creating a blockchain,   |         |
|    | Byzantine failure problem in blockchain, Digital signatures in blockchain, Creating an identity, Signatures in transaction, Asset ownership in blockchain, Transferring an   |         |
|    | asset, Transmitting the transaction, Claiming the asset, Blockchain wallets.   |         |
|    | Unit - 2   |         |
| 4  | Networking in Blockchain.  | 6 hrs   |
|    | Peer-to-peer (P2P) networking, Network discovery, Block synchronization, Building a simple blockchain in a P2P network, Validating a new block, Selecting the longest chain, Conflict resolution, Block exchange between peers, Initial block synchronization, Broadcasting scenarios, Application interfaces.   |         |
| 5  | Cryptocurrency.  | 6 hrs   |
|    | Bitcoin basics, Getting started with Bitcoin Core, Keys and addresses, Transactions,<br>Mining and consensus, Blockchain, Blockchain networks, Bitcoin hard forks and<br>altcoins, A simple cryptocurrency application: Transactions, Wallet, Transaction<br>management.   |         |
| 6  | Diving into Blockchain - Proof of Existence.   | 5 hrs   |
|    | MultiChain blockchain platform, Setting up a blockchain environment, Getting started   |         |
|    | with MultiChain, Proof of Existence architecture, Building the Proof of Existence  |         |
|    | application, Executing and deploying the application.<br>Unit - 3  |         |
| 7  | Diving into Blockchain - Proof of Ownership.   | 4 hrs   |
| ,  | Digital assets and identity, Proof of ownership, Smart contracts, Choosing the smart<br>contract platform, NEO blockchain: Building blocks of a NEO blockchain, NEO<br>technology, NEO nodes, NEO network, NEO transactions, Ethereum blockchain:<br>Ethereum nodes, Getting started, Creating a decentralized application.                            | 4 111 3 |

| 8     | Blockchain Security.         |                    |                    |                          | 4 hrs |  |  |
|-------|------------------------------|--------------------|--------------------|--------------------------|-------|--|--|
|       | Transaction security mode    | el, Decentralized  | security model, At | tacks on the blockchain, |       |  |  |
|       | Threats of quantum comp      | uting.             |                    |                          |       |  |  |

# End Semester Assessment (ESA)

| UNIT | 8 Questions to be set of 20 Marks Each | Chapter Nos. | Instructions                       |
|------|--|--------------|------------------------------------|
| I    | 3 Questions to be set of 20 Marks Each | 1, 2, 3,     | Any 2 questions are to be answered |
| II   | 3 Questions to be set of 20 Marks Each | 4, 5, 6      | Any 2 questions are to be answered |
| Ш    | 2 Questions to be set of 20 Marks Each | 7, 8         | Any 1 question is to be answered   |

# Practices

- 1. Implementation of basic cryptographic algorithms such as AES, ECC, RSA, ECDSA, SHA256.
- 2. Implementation of cryptographic primitives such as hash functions and digital signatures.
- 3. Implementation of P2P blockchain application.
- 4. Implementation of Interface for the cryptocurrency application such as wallet application and explorer application.
- 5. Implement decentralized application development using MultiChain blockchain framework by considering real time use case.
- 6. Develop decentralized application using smart contract concept in NEO and Ethereum blockchain platforms by considering real time use case.
- 7. Simulation of double spend attack on the Bitcoin unconfirmed transaction.

#### Unit I

### **Chapter 1: Introduction to Operating Systems, System structures**

What operating systems do; Computer System organization; Computer System architecture; Operating System structure; Operating System operations; Process management; Memory management; Storage management; Protection and security; Distributed system; Special-purpose systems; Computing environments. Operating System Services; User - Operating System interface; System Types of system calls; System programs; Operating System design and implementation; Operating System structure; Virtual machines; Operating System generation; System boot.

### **Chapter2:Process Management**

Process Concept, Process scheduling Operation on Processes, Interprocess communication, Multi-Threaded Programming: Overview; Multithreading models; Thread Libraries; Threading issues. Process Scheduling: Basic concepts; Scheduling criteria Scheduling algorithms Multiple-Processor scheduling; Thread scheduling.

#### **Chapter 3: Process Synchronization**

Synchronization: The Critical section problem; Peterson's solution; Synchronization hardware; Semaphores; Classical problems of synchronization; Monitors.

#### Unit II

### **Chapter 4: Deadlocks**

Deadlocks: System model; Deadlock characterization; methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detection and recovery from deadlock

### **Chapter 5:Memory Management**

Memory Management Strategies: Background; Swapping Contiguous memory allocation; Paging Structure of page table; Segmentation Virtual Memory Management: Background; Demand paging; Copy-on-write; Page replacement Allocation of frames; Thrashing

### **Chapter 6: File System, Implementation of File System**

File System: File concept; Access methods Directory structure, File system mounting File sharing; Protection. Implementing File System: File system structureFile system implementation; Directory implementation; Allocation methods; Free space management

### Unit III

#### **Chapter 7: Secondary Storage Structures, Protection**

Mass storage structures; Disk structure; Disk attachment; Disk scheduling; Disk management; Swap space management. Protection: Goals of protection, Principles of protection Domain of protection, Access matrix Implementation of access matrix, Access control, Revocation of access rights, Capability-Based systems

### Chapter 8: Case study – Linux operating system

### 7 hrs

| 1                      | <b>Chapter No. 1. Introduction and Fundamental Programming Structures in Java</b><br>History of java, features of java, A simple java programming, Comments, Data Types,<br>Variables, Constants, Operators, Control Flow, Big Numbers, Arrays |                                |                            |
| 2                      | Chapter No. 2. Objects and Class<br>Introduction to Object-Oriented  |                                | , .                        |

|   | Variables, Mutator and Accessor Methods, First Steps with Constructors, Implicit and   |       |
|---|--|-------|
|   | Explicit Parameters, Benefits of Encapsulation, Class-Based Access Privileges, Private   |       |
|   | Methods, Static Fields and Methods, Method Parameters, Object Construction,  |       |
|   | Overloading, Packages.   |       |
| 3 | Chapter No. 3. Inheritance and Java Strings  | 6 Hrs |
|   | Classes, Superclasses, and Subclasses, Inheritance Hierarchies, Polymorphism,  |       |
|   | Dynamic Binding, Preventing Inheritance: Final Classes and Methods, Casting,   |       |
|   | Abstract Classes. Java String, Strings Are Immutable, StringBuffer class, StringBuilder  |       |
|   | class, toString() method, StringTokenizer in Java  |       |
|   | Unit II  |       |
| 4 | Chapter 4: Interfaces and Inner Classes  | 6 Hrs |
|   | Interfaces, Properties of Interfaces, Interfaces and Abstract Classes, Object Cloning,   |       |
|   | Interfaces and Callbacks, Inner Classes, Use of an Inner Class to Access Object State,   |       |
|   | Special Syntax Rules for Inner Classes, Local Inner Classes, Accessing final Variables   |       |
|   | from Outer Methods, Anonymous Inner Classes, Static Inner Classes.   |       |
| 5 | Chapter 5 : Exceptions and Multithreading  | 6 Hrs |
| 5 | Dealing with Errors, The Classification of Exceptions, Declaring Checked Exceptions,   | 01115 |
|   | How to Throw an Exception, Creating Exception Classes, Catching Exceptions,  |       |
|   | Catching Multiple Exceptions, Rethrowing and Chaining Exceptions, The finally Clause;  |       |
|   | Multithreading:- What Are Threads?, Interrupting Threads, Thread States, Thread  |       |
|   | Properties.  |       |
| 6 | Chapter 6: Collections   | 4 Hrs |
| 0 | Collection Interfaces, Collection and Iterator Interfaces in the Java Library, Linked  | 4 113 |
|   | Lists, Array Lists, Hash Sets, Tree Sets, Object Comparison, Queues and Dequeues,  |       |
|   | Priority Queues, Maps  |       |
|   |  |       |
| _ | Unit – III   |       |
| 7 | Chapter 7: Servlets  | 5 Hrs |
|   | Background; The life cycle of servlet, A simple servlet, The Servlet API, The  |       |
|   | javax.servlet Package ,The Servlet Interface, The ServletConfig Interface,   |       |
|   | ServletContext Interface, ServletRequest Interface, ServletResponse  |       |
| 0 | Interface, The Cookies class.  |       |
| 8 | Chapter 8: JSP and Database Access   | 5 Hrs |
|   | Overview of JSP, Invoking java code from JSP, JSP expressions, scriplet, page directive.JDBC Driver, JDBC Packages, Database Connection, JDBC/ODBC Bridge with |       |
|   | the Database, ResultSet, Transaction Processing.   |       |
|   | נווב שמנמשמשב, וובשמונשבו, ודמושמכנוטוו דוטנבשטווא.  |       |
|   |  |       |

|       | User Interface Design Practices   |       |  |  |
|-------|---|-------|--|--|
| SI.No | Activity  | Hours |  |  |
| 1     | <ul> <li>Find two examples of user interfaces (might be desktop software, web applications, smartphone apps, consumer devices, car dashboards, building entrances, traffic intersections, shower controls, etc), one that you consider a good design and one that you consider a bad design. For each interface, you should: <ul> <li>Describe its purpose intended users.</li> <li>Analyze its good and bad points of usability with reference to all the dimensions of usability (learnability, visibility, efficiency, errors)</li> </ul> </li> <li>Illustrate your analysis with appropriate screenshots or photographs.</li> </ul> | 2     |  |  |
| 2     | Design a user interface for a specific task that communicates its conceptual model to the user more effectively, so that users are less likely to make this mistake. Sketch your ideas (alternate designs) on a whiteboard. Critique it, and update the designs.  | 2     |  |  |
| 3     | <ul> <li>Guided by the categories below, make a list of what needs to be made visible, and then brainstorm (and sketch) how the interface might make it visible.</li> <li>Actions: what can the user do?</li> <li>State: what is the current state of the system?</li> <li>Feedback: what was the effect of the user's actions</li> </ul>   | 2     |  |  |
| 4     | <ul> <li>Explore the undo models used in single-user text editing. Choose a few different kinds of textboxes. Experiment with a web browser's undo model for text editing by typing, deleting, changing properties, and using Undo. Try to figure out:</li> <li>How many undo streams are there—one, or many?</li> <li>How is the history divided into undoable units?</li> <li>How much previous state is recovered when you undo? (Selections? cursor positions?)</li> <li>What visible feedback does Undo give? (e.g., if the Undo affects a location scrolled out of the box?)</li> </ul>   | 2     |  |  |
| 5     | User-centered design process, by conducting a lightweight UCD process on a few problems in the classroom.   | 2     |  |  |
| 6     | User Analysis, Task Analysis, Domain Analysis by observing a real environment of people working.  | 2     |  |  |
| 7     | Designing UIs by sketching.   | 2     |  |  |
| 8     | Exploring some of the main structuring patterns of GUI software: the view tree, listeners, and model-view-controller using HTML, Javascript, and jQuery, along with a handy online HTML editor.   | 2     |  |  |
| 9     | Explore about low-fidelity prototyping by creating a simple, hand-drawn prototype in less than 5 minutes, and simulating it with another user.  | 2     |  |  |
| 10    | Information visualization by experimenting with modifications to an existing visualization using a browser.   | 2     |  |  |
| 11    | Exploring some of the principles and pitfalls of color design and typography.   | 2     |  |  |
| 12    | Heuristic evaluation of an e-commerce web site. Record the usability problems   | 2     |  |  |

.

### **Department Master of Computer Applications**

found. Justify every observation by naming one or more usability heuristics (design principles) that it violates. Assign a severity rating to each problem (cosmetic, minor, major, or catastrophic). Include at least one positive usability comment, again justifying it by naming one or more heuristics.

| 4 | Chapter 4 : The Resource-Oriented Architecture  | 4 Hrs |
|---|---|-------|
|   | Resource-Oriented What Now? What's a Resource? URIs: URIs Should Be                       |       |
|   | Descriptive, The Relationship Between URIs and Resources : Addressability,                |       |
|   | Statelessness : Application State Versus Resource State, Representations: Deciding        |       |
|   | Between Representations, Links and Connectedness, The Uniform Interface: GET,             |       |
|   | PUT, and DELETE : HEAD and OPTIONS, POST: Creating subordinate resources,                 |       |
|   | Appending to the resource state, Overloaded POST: The not-so-uniform interface,           |       |
|   | Safety and Idempotence, Safety: Idempotence ,Why safety and idempotence matter            |       |
|   | Why the Uniform Interface Matters, That's It!   |       |
| 5 | Chapter 5 : Designing Read-Only Resource-Oriented Services                                | 4 Hrs |
|   | Resource Design, Turning Requirements Into Read-Only Resources, Figure Out the            |       |
|   | Data Set, General Lessons, Split the Data Set into Resources, General Lessons, Name       |       |
|   | the Resources, Encode Hierarchy into Path Variables, No Hierarchy? Use Commas or          |       |
|   | Semicolons, Map URIs, Scale, Algorithmic Resource? Use Query Variables, URI Recap,        |       |
|   | Design Your Representations: The Representation Talks About the State of the              |       |
|   | Resource, The Representation Links to Other States, Representing the List of Planets,     |       |
|   | Representing Maps and Points on Maps, Representing the Map Tiles, Representing            |       |
|   | Planets and Other Places, Representing Lists of Search Results, Link the Resources to     |       |
|   | Each Other, The HTTP Response : What's Supposed to Happen? Conditional HTTP               |       |
|   | GET, What Might Go Wrong? Conclusion.   |       |
|   | Unit II   |       |
| 6 | Chapter 6 : Designing Read/Write Resource-Oriented Services                               | 4 Hrs |
|   | User Accounts as Resources : Why Should User Accounts Be Resources?                       |       |
|   | Authentication, Authorization, Privacy, and Trust, Turning Requirements into              |       |
|   | Read/Write Resources, Figure Out the Data Set, Split the Data Set into Resources,         |       |
|   | Name the Resources with URIs, Expose a Subset of the Uniform Interface, Design the        |       |
|   | Representation(s) Accepted from the Client, Design the Representation(s) to Be            |       |
|   | Served to the Client, Link This Resource to Existing Resources, What's Supposed to        |       |
|   | Happen? What Might Go Wrong?  |       |
|   | Custom Places : Figure Out the Data Set, Split the Data Set into Resources, Name the      |       |
|   | Resources with URIs, Expose a Subset of the Uniform Interface ,Design the                 |       |
|   | Representation(s) Accepted from the Client, Design the Representation(s) Served to        |       |
|   | the Client, Link This Resource to Existing Resources, What's Supposed to Happen?          |       |
|   | What Might Go Wrong?  |       |
|   | A Look Back at the Map Service  |       |
| 7 | Chapter 7 : A Service Implementation :  | 4 Hrs |
|   | <u>A Social Bookmarking Web Service, Figuring Out the Data Set, Resource Design: REST</u> | 71113 |
|   | in Rails, The User Controller, The Bookmarks Controller, The User Tags Controller, The    |       |
|   | Calendar Controller, The URI Controller, The Recent Bookmarks Controller, The             |       |
|   | Bundles Controller, The Leftovers, Remodeling the REST Way, Implementation: The           |       |
|   | routes.rb File.   |       |
|   |   |       |

|    | Design the Democratation (a) Assembled from the Client Design the Democratation (a)     |       |
|----|---|-------|
|    | Design the Representation(s) Accepted from the Client, Design the Representation(s)     |       |
|    | Served to the Client, Connect Resources to Each Other, What's Supposed to Happen?       |       |
|    | What Might Go Wrong? Controller Code : What Rails Doesn't Do:Conditional GET:           |       |
|    | param[:id] for things that aren't IDs, The Application Controller, The Users Controller |       |
|    | The Bookmarks Controller, The Tags Controller, The Lesser Controllers, The Calendar     |       |
|    | Controller : The RecentController, The UrisController, Model Code: The User Model       |       |
|    | The Bookmark Model, What Does the Client Need to Know? Natural-Language Service         |       |
|    | Description, Description Through Standardization, Hypermedia Descriptions               |       |
| 8  | Chapter 8 : REST and ROA Best Practices   | 4 Hrs |
|    | Resource-Oriented Basics, The Generic ROA Procedure, Addressability :                   |       |
|    | Representations Should Be Addressable : State and Statelessness: Connectedness,         |       |
|    | The Uniform Interface : Safety and Idempotence, New Resources: PUT Versus               |       |
|    | POSTOverloading POST, This Stuff Matters : Why Addressability Matters, Why              |       |
|    | Statelessness Matters, Why the Uniform Interface Matters, Why Connectedness             |       |
|    | Matters A terrifying example. Resource Design : Relationships Between Resources,        |       |
|    | Asynchronous Operations, Batch Operations, Transactions: When In Doubt, Make It a       |       |
|    | Resource, URI Design, Outgoing Representations, Incoming Representations, Service       |       |
|    | Versioning, Permanent URIs Versus Readable URIs, Standard Features of HTTP :            |       |
|    | Authentication and Authorization: Basic authentication, Digest authentication, WSSE     |       |
|    | username token : Compression, Conditional GET, Caching : Please cache Thank you         |       |
|    | for not caching, Default caching rules, Look-Before-You-Leap, Requests Partial GET :    |       |
|    | Faking PUT and DELETE, The Trouble with Cookies, Why Should a User Trust the HTTP       |       |
|    | Client?, Applications with a Web Interface, Applications with No Web Interface What     |       |
|    | Problem Does this Solve?  |       |
| 9  | Chapter 9 : The Building Blocks of Services   | 4 Hrs |
|    | Representation Formats : XHTML, XHTML with Microformats, Atom, OpenSearch               |       |
|    | SVG, Form-Encoded Key-Value Pairs, JSON, RDF and RDFa,                                  |       |
|    | Framework-Specific Serialization Formats : Ad Hoc XHTML, Other XML Standards and        |       |
|    | Ad Hoc Vocabularies, Encoding Issues, XML and HTTP: Battle of the encodings, The        |       |
|    | character encoding of a JSON document   |       |
|    | Prepackaged Control Flows: General Rules, Database-Backed Control Flow, GET, PUT,       |       |
|    | POST for creating a new resource, POST for appending to a resource, DELETE              |       |
|    | The Atom Publishing Protocol: Collections, Members, Service document, Category          |       |
|    | documents, Binary documents as APP members, GData: Querying collections, Data           |       |
|    | extensions, POST Once Exactly,  |       |
|    | Hypermedia Technologies : URI Templates, XHTML 4, XHTML 4 links, XHTML 4 forms,         |       |
|    | Shortcomings of XHTML 4, XHTML 5, WADL : Describing a del.icio.us resource,             |       |
|    | Describing an APP collection, Is WADL evil?   |       |
| 10 | Chapter 10 : The Resource-Oriented Architecture Versus Big Web Services                 | 4 Hrs |
|    | What Problems Are Big Web Services Trying to Solve?                                     |       |
|    | SOAP :The Resource-Oriented Alternative, WSDL: The Resource-Oriented Alternative,       |       |
|    | UDDI: The Resource-Oriented Alternative, Security: The Resource-Oriented                |       |

|        | world in Liquibase, The change       | log file, The pom.xml file, Manual      | installation,              |

Microservices, Interlude – Conway's Law, How to keep service interfaces forward compatible, Microservices and the data tier, DevOps, architecture, and resilience

### 4 Chapter 4 : Everything is Code

The need for source code control, The history of source code management, Roles and code, Which source code management system? A word about source code management system migrations, Choosing a branching strategy, Branching problem areas, Artifact version naming, Choosing a client, Setting up a basic Git server, Shared authentication, Hosted Git servers, Large binary files, Trying out different Git server implementations, Docker intermission, Gerrit : a ) Installing the git-review package, b)The value of history revisionism, The pull request model, GitLab

#### Unit II

### 5 Chapter 5 : Building the Code

6 Hrs

6 Hrs

Why do we build code? The many faces of build systems, The Jenkins build server, Managing build dependencies, The final artifact, Cheating with FPM, Continuous Integration, Continuous Delivery, Jenkins plugins, The host server, Build slaves, Software on the host, Triggers, Job chaining and build pipelines, A look at the Jenkins filesystem layout, Build servers and infrastructure as code, Building by dependency order, Build phases, Alternative build servers, Collating quality measures, About build status visualization, Taking build errors seriously, Robustness

### 6 Chapter 6 : Testing the Code

Manual testing, Pros and cons with test automation, Unit testing, JUnit in general and JUnit in particular, A JUnit example, Mocking, Test Coverage, Automated integration testing, Docker in automated testing, Arquillian, Performance testing, Automated acceptance testing, Automated GUI testing, Integrating Selenium tests in Jenkins, JavaScript testing, Testing backend integration points, Test-driven development, REPL-driven development, A complete test automation scenario : Manually testing our web application, Running the automated test, 3Finding a bug, Test walkthrough, Handling tricky dependencies with Docker

### 7 Chapter 7 : Deploying the Code

Why are there so many deployment systems? Configuring the base OS, Describing clusters, Delivering packages to a system, Virtualization stacks: Executing code on the client, A note about the exercises, The Puppet master and Puppet agents, Ansible, PalletOps, Deploying with Chef, Deploying with SaltStack, Salt versus Ansible versus Puppet versus PalletOps execution models, Vagrant, Deploying with Docker, Comparison tables, Cloud solutions, AWS, Azure.

### 8 Chapter 8 : Monitoring the Code

Nagios, Munin, Ganglia, Graphite, Log handling, Client-side logging libraries, The ELK stack.

Unit – III

### 9 Chapter 9 : Issue Tracking

What are issue trackers used for? Some examples of workflows and issues, What do

6 Hrs

4 Hrs

4 Hrs

5 Hrs

|          | we need from an issue trackers : Bugzilla, Trac,                                |   |  |  | 1 ,   |                   |

### **DevOps Practice Exercise:**

The objectives of these practice exercise is to learn DevOps best practices and to define entire infrastructure as code and learn about infrastructure as code, continuous integration, continuous delivery, Terraform, AWS, Packer, Docker, and much more.

- 1) **DevOps basics:** Learn the origins of DevOps and the basic principles and techniques.
- 2) AWS crash course: Hands-on session where you learn to use the most important AWS services, including IAM, EC2, ASG, EBS, ELB, S3, and RDS.
- **3)** Infrastructure as code: Overview of different techniques to manage infrastructure, including ad-hoc scripts (e.g., Bash, Python), configuration management tools (e.g., Chef, Puppet), machine images (e.g., VMs, Docker), and provisioning tools (e.g., Terraform, CloudFormation).
- **4) Terraform introduction**: Go through a series of coding exercises that cover the basic Terraform syntax, state management, loops, conditionals, lifecycle management, and common gotchas.

- **5)** Advanced Terraform: Go through a series of coding exercises that cover Terraform modules, file layout, keeping code DRY, team workflows, and automated testing.
- **6) Immutable infrastructure:** Overview of immutable infrastructure practices, versioning artifacts, promoting artifacts through environments, and deployment.
- 7) Packer introduction: Build your own AMIs and other virtual machine images using Packer.
- 8) Docker introduction: Create your own Docker images and deploy them using Docker orchestration tools.
- **9) Continuous delivery**: Learn how to integrate Terraform, Packer, and Docker into a continuous delivery pipeline.
- **10) DevOps best practices**: Learn about continuous integration, microservices, feature toggles, canary deployments, monitoring, alerting, and log aggregation.
- **11) Production readiness review:** A Gruntwork engineer goes through a checklist of questions with your team to see what work you need to do to be ready for prod.
- 12) Architecture deployment: Deploy your customized Reference Architecture in AWS.
- **13)** Architecture walkthrough: Overview of how the architecture works and how to use it.
- **14) Migrating to the new architecture:** Learn the process of migrating your apps and data to the new architecture.

| No | Content  | Hrs   |
|----|--|-------|
|    | Unit I   |       |
| 1  | <b>Chapter 1: Introduction, Parallel and distributed systems</b><br>Network-centric computing and network centric content, peer-to-peer systems, Cloud computing basics, delivery models and services, Ethical issues, cloud vulnerabilities, major challenges; parallel computing, parallel computer architecture, Distributed systems, communication protocol and process coordination, logical clocks, message delivery rules, casual delivery, Concurrency, atomic actions, consensus protocols, modularity: client-server paradigm. | 6 Hrs |
| 2  | <b>Chapter 2: Cloud Infrastructure</b><br>Cloud computing at Amazon, cloud computing: the Google perspective, Microsoft windows Azure and online services; open-source software platforms for private clouds; Cloud storage diversity and vendor lock-in; Cloud computing interoperability: the intercloud; Energy use and ecological impact of large-scale data centers; Service and compliance level agreements; User experience; Software licensing.  | 6 Hrs |
| 3  | <b>Chapter 3: Cloud Computing: Applications and Paradigms</b><br>Challenges for cloud computing; Existing cloud applications and new application<br>opportunities; Architectural styles for cloud applications; Workflows: Coordination of<br>multiple activities; The MapReduce programming model; Case studies.  | 4 Hrs |
|    | Unit II  |       |
| 4  | <b>Chapter 4: Cloud Resource Virtualization</b><br>Virtualization; Layering and virtualization; Virtual machine monitors; Virtual machines;<br>Performance and security isolation; Full virtualization and Para virtualization;<br>Hardware support for virtualization; Case study; Optimization of network<br>virtualization; vBlades; A performance comparison of virtual machines; Software fault<br>isolation;   | 6 Hrs |
| 5  | <b>Chapter 5: Cloud Resource Management and Scheduling</b><br>Policies and mechanisms for resource management; Applications of control theory to task scheduling on a cloud; Stability of a two-level resource allocation architecture; Feedback control based on dynamic thresholds; Coordination of specialized autonomic performance managers; A utility-based model for cloud-based web services; Resource bundling; Scheduling algorithms for computing clouds; Fair queuing; Resource management and dynamic application scaling.  | 6 Hrs |
| 6  | <b>Chapter 6: Networking Support</b><br>Packet-switched networks; The Internet; Internet migration to IPV6; The transformation<br>of the Internet; Web access and the TCP congestion control window; Network resource<br>management; Interconnection networks for computer clouds; Content-delivery networks;<br>Overlay networks and small-world networks.  | 4 Hrs |
|    | Unit – III   |       |

| 7   | Chapter 7: Storage Systems   | 5 Hrs   |
|-----|--|---------|
|     | The evolution of storage technology; Storage models, file systems and databases;           |         |
|     | Distributed file systems: The precursors; General parallel file system; Google File        |         |
|     | System; Apache Hadoop; Locks and Chubby: A locking service; Transaction processing         |         |
|     | and NoSQL and databases; BigTable; Megastore.  |         |
| 8   | Chapter 8: Cloud Security  | 5 Hrs   |
|     | Cloud security risks; Security: The top concern for cloud users; Privacy and privacy       |         |
|     | impact assessment; Trust; Operating system security; Virtual machine security;             |         |
|     | Security of virtualization; Security risks posed by shared images; Security risks posed by |         |
|     | a management OS; A trusted virtual machine monitor.  |         |

| Assessment | Theory | Lab. |
|------------|--------|------|
| ISA- 1     | 25     | 100  |
| ISA- 2     | 25     | 100  |
| ESA        | 50     | 00   |
| Total      | 100    | 100  |

### End Semester Assessment (ESA) Pattern:

Assessment

| UNIT | 8 Questions to be set of 20 Marks | Chapter Nos. | Instructions                     |  |  |  |  |
|------|-----------------------------------|--------------|----------------------------------|--|--|--|--|
|      | Each                              |              |                                  |  |  |  |  |
| I    | 3 Questions to be set of 20 Marks | 1,2,3        | Any 2 questions are to be        |  |  |  |  |
|      | Each                              |              | answered                         |  |  |  |  |
| Ш    | 3 Questions to be set of 20 Marks | 4,5,6        | Any 2 questions are to be        |  |  |  |  |
|      | Each                              |              | answered                         |  |  |  |  |
| Ш    | 2 Questions to be set of 20 Marks | 7,8          | Any 1 question is to be answered |  |  |  |  |
|      | Each                              |              | Any 1 question is to be answered |  |  |  |  |

| Cloud Computing Practices |  |                    |  |  |  |
|---------------------------|--|--------------------|--|--|--|
| Expt<br>No.               | Brief description about the experiment                                       | Number<br>Of Slots |  |  |  |
|                           | DEMONSTRATION  |                    |  |  |  |
| 1                         | Cloud computing resources access using Windows Azure Infrastructure Services | 1                  |  |  |  |

### **Evaluation Scheme**

| 2  | Registering a DNS Server in Windows Azure                             | 1 |
|----|---|---|
| 3  | Introduction to Google app engine for Java.                           | 1 |
| 4  | Creation an Amazon VPC.   | 1 |
| 5  | Setting up Routing in VPC and Deploying Amazon EC2 instance in Amazon | 1 |
|    | VPC   |   |
|    | EXERCISE  |   |
| 6  | Introduction of cloud using windows Azure.                            | 1 |
| 7  | Collaborating on Calendars Schedules and Task Management, Event       | 1 |
|    | Management, Contact Management, Project Management, Word              |   |
|    | Processing, Spreadsheets, Databases, Presentations.                   |   |
| 8  | Implementation of web app on Google app engine.                       | 1 |
| 9  | Implementation of Amazon VPC.   | 1 |
| 10 | Implementation of network programming using mininet.                  | 1 |
| 11 | Collaborating via Web Based Communication Tools, Social Networks and  | 1 |
|    | Groupware, Blogs and Wikis.   |   |
|    | STRUCTURED ENQUIRY  |   |
| 12 | Develop a tree topology structure with more than 20 hosts using       | 2 |
|    | controller and switches in mininet.                                   |   |
|    |   |   |

- 4. Christopher Bishop.Pattern Recognition and Machine Learning. 2e.

#### References:

1. Introduction to machine learning with python by Andreas C.Miiller and Sarah Guide Machine Learning Practices Using Python

- Implement linear regression with one variable to predict profits for a food truck. Suppose you are the CEO of a restaurant franchise and are considering different cities for opening a new outlet. The chain already has trucks in various cities and you have data for profits and populations from the cities.
- Build a logistic regression model to predict whether a student gets admitted to a university. Suppose that you are the administrator of a university department and you want to determine each applicant's chance of admission based on their results on two exams.
- 3) Implement one-vs-all logistic regression and neural networks to automate handwritten digit recognition (0 to 9)
- 4) Implement the backpropagation algorithm for neural networks and apply it to task of hand –written digit recognition.
- 5) Build a Spam Classifier using Support Vector Machines.
- 6) Implement the K-means clustering algorithm and apply it to compress an image.
- 7) Build Principle Component analysis to find a low dimensional representation of face images.
- 8) Implement the anomaly detection algorithm and apply it to detect failing servers on a network.
- 9) Build a recommender system for movies by using collaborative filtering.

#### **Evaluation Scheme**

#### 3. Assessment

| Assessment | Theory | Lab. |
|------------|--------|------|
| ISA- 1     | 25     | 100  |
| ISA- 2     | 25     | 100  |
| ESA        | 50     | 00   |
| Total      | 100    | 100  |

## LAB REQUIREMENTS:

• A modern web-browser with HTML5 and JavaScript enabled.

• Remote Desktop Client connection software.

• Internet connectivity Microsoft Account (LiveID).

## LIST OF EXERCISES

| #  | Topics  | ACTIVITY   |
|----|---|--|
| 1. | Web Server  | Apache Web Server, IIS Server: Install and Configure the Apache Web Server on Linux and IIS server on windows.   |
| 2. | Samba Server  | Implementation of Windows files and print services for Linux allowing the sharing of files and printers between Windows and Linux.   |
| 3. | LDAP Server   | LDAP Server: Lightweight Directory Access Protocol- Server Installation to access a directory service.   |
| 4. | Mail Server   | Mail Server configuration- POP3 Server, IMAP Server  |
| 5. | Proxy Server  | Develop a small web proxy server, which is able to cache web pages. It is a very simple proxy server which only understands simple GET-requests, but is able to handle all kinds of objects - not just HTML pages, but also images.  |
| 6. | Firewalls and<br>NAT (Network<br>Address<br>Translation)  | Use of iptables to build a permissive firewall by selectively filtering packets<br>based on protocol type.<br>To demonstrate how addresses may be translated from private addresses<br>to public and vice versa as they pass in and out of the firewall.   |
| 7. | Cloud<br>Infrastructure:<br>Azure Hands-on<br>Build your<br>Infrastructure in<br>the Cloud using<br>Windows Azure | <ol> <li>Login to the Windows Azure Management Portal, Define a new<br/>Windows Azure Affinity Group and Create a new Windows Azure<br/>Storage Account.</li> <li>Register a DNS Server in Windows Azure.</li> <li>Define a Virtual Network in Windows Azure.</li> <li>Configure Windows Server Active Directory in a Windows Azure VM.</li> <li>Configure New Machine for File Services in a Windows Azure VM.</li> </ol> |

Data models, schemas and instances; Three-schema Architecture and Data Independence; Database Languages and Interfaces. |   |                           |  |                | 5 Hrs               |                   |     |

| 2 | Chapter 2 : Conceptual Data Modeling Using Entities and Relationships                                 | 5 Hrs |
|---|---|-------|
|   | Using High Level Conceptual Data Models for database Design; A Sample Database                        |       |
|   | Application, Entity Types, Entity Sets, Attributes and Keys, Relationship Types,                      |       |
|   | Relationship Sets, Roles and Structural Constraints, Weak Entity Types, Refining the ER               |       |
|   | Design for the COMPANY Database, ER Diagram, Naming Conventions and Design                            |       |
|   | Issues, Relationships Higher than Two.  |       |
| 3 | Chapter 3 : The Basic (Flat) Relational Model and Relational Algebra                                  | 6 Hrs |
|   | Relational Model Concepts; Relational Model Constraints and Relational Database                       |       |
|   | Schemas; Update Operations, Transactions and dealing with constraint violations.                      |       |
|   | Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from                   |       |
|   | Set Theory; Binary Relational Operations: JOIN and DIVISION; Additional Relational                    |       |
|   | Operations; Examples of Queries in Relational Algebra. Relational Database Design                     |       |
|   | using ER-to-Relational Mapping.<br>Unit II  |       |
| _ |   |       |
| 4 | Chapter 4 : SQL   | 7 Hrs |
|   | SQL Data Definition and Data Types; Specifying Constraints in SQL; Basic Retrieval                    |       |
|   | Queries in SQL; Insert, Delete and Update statements in SQL; More Complex SQL                         |       |
|   | Retrieval Queries, Specifying Constraints as Assertions and Action as Triggers; Views                 |       |
|   | (Virtual Tables) in SQL; Schema Change Statements in SQL; Database programming issues and techniques. |       |
| 5 | Chapter 5: Database Design  | 6 Hrs |
| 5 | Informal Design Guidelines for Relation Schemas; Functional Dependencies; Normal                      | 01113 |
|   | Forms Based on Primary Keys; General Definitions of Second and Third Normal Forms;                    |       |
|   | Boyce-Codd Normal Form; Multivalued Dependencies and Fourth Normal Form; Join                         |       |
|   | Dependencies and Fifth Normal Form.   |       |
| 6 | Chapter 6: Object and Object-Relational Databases   | 3 Hrs |
|   | Overview of Object Database Concepts, Object-Relational Features: Object Database                     |       |
|   | Extensions to SQL.  |       |
|   | Unit – III  |       |
| 7 | Chapter 7: Foundations of Database Transaction Processing and Concurrency Control                     | 4 Hrs |
|   | Introduction to Transaction Processing; Transaction and System Concepts; Desirable                    |       |
|   | Properties of Transactions; Characterizing Schedules Based on Recoverability;                         |       |
|   | Characterizing Schedules Based on Serializability; Transaction Support in SQL. Two-                   |       |
|   | Phase Locking Techniques for Concurrency control; Concurrency control based on                        |       |
|   | Timestamp Ordering; Multiversion Concurrency control Techniques; Validation                           |       |
|   | Concurrency Control Techniques; Granularity of Data Items & Multiple Granularity                      |       |
|   | Locking; Using Locks for Concurrency Control in Indexes; Other Concurrency Control                    |       |
|   | lssues.   |       |
| 8 | Chapter 8. Introduction to Database Recovery Protocols  | 4 Hrs |
|   | Recovery Concepts, NO-UNDO/REDO Recovery Based on Deferred update; Recovery                           |       |
|   | Techniques based on Immediate update; Shadow paging; The ARIES Recovery                               |       |
|   | Algorithm; Recovery in Multi database Systems; Database Backup and Recovery from                      |       |
|   | Catastrophic Failures.  |       |

|   |  | Total  | 100       |  |  |

Schemas \*

i)Student-Enrollment Database.

Consider the following relations:

Student(snum: integer, sname: string, major: string, level: string, age: integer)

Class(<u>name: string</u>, meets at: string, room: string, fid: integer)

Enrolled(snum: integer, cname: string)

Faculty(<u>fid: integer</u>, fname: string, deptid: integer)

Enrolled has one record per Student-class pair such that the student is enrolled in the class.

Write the following queries in SQL.

1. Create the above tables by properly specifying all the integrity constraints.

2. Insert at least five tuples into each table.

3. Find the names of all Juniors (level=JR) who are enrolled in a class taught by I.John.

4. For each level, print the level and the average age of students for that level.

5. Find the names of students not enrolled in any class.

## ii) Insurance Database.

Consider the insurance database given below.

PERSON (driverid: String, name: String, address: String)

CAR (regno: String, model: String, year: Int)

ACCIDENT (repno: Int, dat: Date, location: String)

OWNS (driverid: String, regno: String)

PARTICIPATED (driverid: String, regno: String, repno: Int, damageamt: Int)

Write the following queries in SQL.

1. Create the above tables by properly specifying the integrity constraints.

- 2. Enter at least five tuples for each relation.
- 3. Demonstrate how you

\* Update the damage amount for the car with a specific Regno in the accident with report number 12 to 25000

- \* Add a new accident to the database
- 4. Find the total number of people who owned cars that were involved in accidents in 2002.
- 5. Find the number of accidents in which cars belonging to a specific model were involved.

## iii)Company Database:

- The company is organized into departments.Each department has a unique name, a unique number, and a particular employee who manages the department.We keep track of the start date when that employee began managing the department.A department may have several locations.
- A department controls a number of projects, each of which has a unique name, a unique number, and a single location.
- We store each employee's name,Social Security number, address,salary,gender) and birth date. An employee is assigned to one department, but may work on several projects, which are not necessarily controlled by the same department. We keep track of the current number of hours per week that an employee works on each project. We also keep track of the direct supervisor of each employee (who is another employee).
- We want to keep track of the dependents of each employee for insurance purposes. We keep each dependent's first name, gender, birth date, and relationship to the employee.

Write the following queries in SQL for the Company database

- 1. To display the details of all the Employee whose first name starts with "S".
- 2. To display name and address of all employee who work for "MCA" department.
- 3. To display the names of employee who do not have supervisor.
- 4. To retrieve First name and salary of all employees in department 5 whose salary is between Rs.30,000 and 40,000.
- 5. For each department , to retrieve the department number, the number of employees in that department and their average salary.

## iv)Movie Database

Movie Database. Data requirements of movie industry are captured.

•Each movie is identified by title and year of release. Each movie has length in minutes and classified under one genres (like action, horror etc.). Each movie has a plot outline.

• Production companies are identified by name and each has an address. A production company

produces one or more movies.

•Actors are identified by id. Other details like name and date of birth of actors are also stored. Each actor acts in one or more movies. Each actor has a role in movie.

• Directors are identified by id. Other details like name and date of birth of directors are also stored. A Director can act in a movie (including the one that he or she may also direct). Each director directs one or more movies.

•Each movie has one or more actors and one or more directors and is produced by a production company.

Solve the following queries in SQL:-

a. List the details of horror movies released in 2012 and directed by more than 2 directors.

b. List the details of actors who acted in movies having same titles but released before 2000 and after 2010.

c. List the details of production companies producing maximum movies.

d. List the details of movies where director and actor have same date of birth.

e. Retrieve the names of directors directed all the movies produced by any one production company.

### **Evaluation Scheme**

## 1. In Semester Assessment (ISA)

| Assessment | Marks |  |  |
|------------|-------|--|--|
| ISA- 1     | 15    |  |  |
| ISA- 2     | 15    |  |  |
| Activities | 20    |  |  |
| ISA        | 50    |  |  |
| ESA        | 50    |  |  |
| Total      | 100   |  |  |
|            |       |  |  |

## 2. End Semester Assessment (ESA)

| UNIT | 8 Questions to be set of 20 Marks Each | Chapter Nos. | Instructions                       |
|------|--|--------------|------------------------------------|
| I    | 3 Questions to be set of 20 Marks Each | 1, 2, 3      | Any 2 questions are to be answered |
| II   | 3 Questions to be set of 20 Marks Each | 4,5,6        | Any 2 questions are to be answered |
| III  | 2 Questions to be set of 20 Marks Each | 7,8          | Any 1 question is to be answered   |

- 4 Dr. Kumar Sourabh, Cloud Computing, 2nd Edition, Wiley India, 2011.

| # | TOPICS  | ACTIVITY  | WEIGHTAGE |
|---|---|---|-----------|
| 1 | Introduction,<br>Parallel and<br>distributed<br>systems | Compare the three cloud computing delivery models, SaaS,<br>PaaS, and IaaS, from the point of view of the application<br>developers and users. Discuss the security and the reliability of<br>each one of them. Analyze the differences between the PaaS<br>and the IaaS.   | 15        |
|   |   | An IT company decides to provide free access to a public cloud<br>dedicated to higher education. Which one of the three cloud<br>computing delivery models, SaaS, PaaS, or IaaS should it<br>embrace and why? What applications would be most beneficial<br>for the students? Will this solution have an impact on distance<br>learning? Why? |           |
|   |   | What is in your opinion the critical step in the development of a systematic approach to all-or-nothing atomicity? What does a systematic approach means? What are the advantages of a systematic versus an ad-hoc approach to atomicity?   |           |
| 2 | Cloud<br>Infrastructure                                 | Several desirable properties of a large-scale distributed system<br>includes transparency of access, location, concurrency,<br>replication, failure, migration, performance, and scaling.<br>Analyze how each one of these properties applies to AWS.<br>Demonstration Cloud services using AWS or Azure or Google                            | 15        |
|   |   | Cloud.<br>Compare the Oracle Cloud offerings (see   |           |

#### ACTIVITIES

|   |  | Amazon, Google, and Microsoft.  |    |
|---|--|---|----|
| 3 | Cloud<br>Computing:<br>Applications and<br>Paradigms | Download and install the Zookeper from the site<br><u>http://zookeeper.apache.org/</u> . Use the API to create the basic<br>workflow patterns or Use the AWS CloudFormation service to<br>create the basic workflow patterns.<br>Search the web for reports of cloud system failures and discuss<br>the causes of each incident.              | 10 |
|   |  | Research the power consumption of processors used in mobile<br>devices and their energy efficiency. Rank the components of a<br>mobile device in terms of power consumption. Establish a set<br>of guidelines to minimize the power consumption of mobile<br>applications.  |    |
| 4 | Cloud Resource<br>Virtualization                     | Virtualization simplifies the use of resources, isolates users<br>from one another, supports replication and mobility, but exacts<br>a price in terms of performance and cost. Analyze each one of<br>these aspects for: (i) memory virtualization, (ii) processor<br>virtualization, and (iii) virtualization of a communication<br>channel. | 15 |
|   |  | Virtualization of the processor combined with virtual memory management pose multiple challenges; analyze the interaction of interrupt handling and paging.   |    |
|   |  | In Section 5.6 we state that a VMM for a processor can be<br>constructed if the set of sensitive instructions is a subset of the<br>privileged instructions of that processor. Identify the set of<br>sensitive instructions for the x86 architecture and discuss the<br>problem each one of these instruction poses.                         |    |
| 5 | Cloud Resource<br>Management<br>and Scheduling       | Analyze the benefits and the problems posed by the four<br>approaches for the implementation of resource management<br>policies: control theory, machine learning, utility based,<br>market-oriented.   | 15 |
|   |  | Can optimal strategies for the five classes of policies, admission<br>control, capacity allocation, load balancing, energy<br>optimization, and QoS guarantees be actually implemented in a<br>cloud? Support your answer with solid arguments.   |    |
|   |  | Multiple controllars are probably percessary due to the scale of  |    |

|                              |   |  |   | ficial to have<br>your answers.   |  | application  |     |
