| | | | |
| | | | |
| d) Manages : <u>Emp_no</u> Maanager_name Mang_no | | | |
| | | | |
| Note: Primary keys are underlined. | | | |
| EXERCISE 2 | | | |
| | | | |
| Write a PL/SQL code to calculate total and percentage of marks of the students in four subjects. | | | |
| | | | |
| EXERCISE 3 | | | |
| | | | |
| Write a PL/SQL code to calculate the total and the percentage of marks of the students in four subjects | | | |
| from the table- Student with the schema given below. | | | |
| | | | |
| STUDENT (RNO , S1 , S2, S3, S4, total, percentage) | | | |
| EXERCISE 4 | | | |
| | | | |
| Write a PL/SQL code to display employee number, name and basic of 5 highest paid employees. | | | |
| (Usage of cursors) | | | |
| | | | |
| EXERCISE 5 | | | |
| Write a PL/SQL code to calculate the total salary of first n records of emp table. The value of n is | | | |
| passed to cursor as parameter. | | | |
| | | | |
| EXERCISE 6 | | | |

EXERCISE 6

Write a trigger on the employee table which shows the old values and new values of Ename after any updations on ename on Employee table

EXERCISE 7

Write a row trigger to insert the existing values of the salary table in to a new table when the salary table is updated.

EXERCISE 8

Write a PL/SQL procedure to find the number of students ranging from 70-100%, 60-69%, 50-59% & below 49% in each course from the student_course table .

Student database with the tables and fields specified as below.

| a) | Student : | Roll_no | Student_ name | Course | Gender |

Text Book:

- 1. "Professional NoSQL" by Shashank Tiwari, 2011, WROX Press (Chapter 1,2,3,4,5,6,7.8.9,10.11.12.13.15)
- 2. The Definitive guide to MongoDB, The NoSQL Database for Cloud and Desktop Computing, Apress 2010. (Chapter 6,7,8,9).

NOSQL PRACTICES

COURSE DESCRIPTION:

The widespread emergence of big data storage needs has driven the development and adoption of a new class of non - relational databases commonly referred to as NoSQL databases. The NoSQL (or Not-Only SQL) databases are basically developed to meet the requirements of the modern cloud-based decentralized apps and are a good solution as compared to the relational databases in many ways. These unstructured databases are widely known for their non-relational and schema less data model, improved performance and scalability factors which are always an issue with relational database systems. This course will explore the origins of NoSQL databases and the characteristics that distinguish them from traditional relational database management systems. Core concepts of NoSQL databases will be presented followed by an exploration of how different database technologies implement these core concepts.

OBJECTIVES

- Demonstrate competency in designing NoSQL database management systems.
- Demonstrate competency in describing how NoSQL databases differ from relational databases from a theoretical perspective.
- Demonstrate competency in selecting a particular NoSQL database for specific use cases.

LAB REQUIREMENTS:

- o Computer with latest configuration having Windows and Unix OS Versions.
- Java software installed.

| Expt./ | Lab | Implementation | Number of |
|--------|---------------------------------|---|-----------|
| Job | assignments/experiment | | Hours |
| No. | | | |
| 1. | Set up MongoDB environment. | i. Installation of MongoDB on Windows and Unix platform. ii. Operations on Start, Stop and Restart MongoDB. iii. Using MongoDB Help. iv. Getting MongoDB Statistics. | 02 |
| 2. | Create/Drop, NoSQL Datatypes | i. Differentiate between database, document and collection. ii. Create Database, Drop Database. iii. Create Collection, Drop Collection. iv. MongoDB Datatypes. | 02 |
| 3. | Working with MongoDB Documents | Insert Document, Update Document, Delete Document, | 02 |
| 4. | Data Retrieval | i. Projection ii. Limit Records iii. Sort Records iv. Indexing v. Aggregation | 02 |
| 5. | Creating Backup | i. Replication ii. Sharding iii. Create Backup | 02 |

WEB CONTENT MANAGEMENT SYSTEM – COURSE PROJECT

COURSE DESCRIPTION:

Today, many web publishers use content management systems (CMS) to allow them to instantly and dynamically update web pages and properties as new content becomes available so that every visit to a site is engaging, informative, and meaningful. The course project shall explore any one of the three most popular open source web-based content management systems—**WordPress, Joomla, and Drupal**—to create dynamic and flexible websites and landing pages. Students shall explore the fundamentals of planning dynamic websites, CMS database management, developing CSS-controlled site templates, and creating database-driven websites through the planning and creation of their own topic-based sites.

OBJECTIVES

- Introduce learners to any one of the three most popular open source content management systems (CMS) such as WordPress, Drupal, or Joomla.
- Create, deploy and Maintain websites using CMS, including creating and editing content, adding functionality, and creating custom templates and themes.

COURSE PROJECT TITLE: BUILDING WEBSITE USING CMS (JOOMLA / WORDPRESS OR DRUPAL)

To build website for any real world examples such as Corporate web sites or portals, Online magazines, newspapers, and publications, E-commerce and online reservations, Government applications, Small business web sites, Community-based portals, School, religious web sites or Personal or family homepages using popular Web Content Management System. The website shall facilitate to create, manage, store and deploy content on the Web, including text, graphics, video or audio as a part of Enterprise Content Management.

EXECUTION PLAN:

| SI.No | Demonstration | Implementation | Number of Slots |
|-------|---|----------------|-----------------|
| 1. | Introducing Content Management Systems An overview of some of the different tools and methods that today's web publishers are using to create highly-tailored dynamic web content. | | 02 |
| | Purchasing and configuring a domain name and web hosting. | | |

| | Department of Master of C | | Page of Page 20 of 9 |
|----|--|---|----------------------|
| Со | ntent- Unique courses by 2015 to 2020 batc | hes (Removed Duplicate by Couse Code) | Year: 2015-20 batche |
| 2. | Introduction to Joomla Explore the CAM model (Categories, Articles, and Menus) approach to creating content for Joomla environments. Administration and management of users and media. Installing Joomla Exploring the Admin Interface Content creation using the CAM model Content customization: images, video, audio, tags, formats, etc. | Write an article & put your articles in order with categories. Customize Administrator's Panel Change your website's look with Templates. Expand your website's functionality with different extensions. Content creation & Customization using the CAM model | 02 |
| 3. | Joomla Menus Creating and controlling menus for Joomla site. To link to articles and create special menu items. Adding and displaying menus Linking menus to articles and other features | Categorize the articles which allow grouping your content better. Create menu items for website. | 02 |
| 4. | Extending Joomla –Plug-ins, Modules Use of Joomla, Plug-ins, Modules, Components and other extensions. Installation of extensions, Finding and adding Joomla extensions Adding and setting up 2 "big" extensions (choose blog, calendar, image gallery, Paypal- based shopping cart, or portfolio. Other extensions on approval) | Select Create Joomla Modules for the website such as Feed Display Module, Footer Module, Latest News Module, Search Module, Random Image Module, Who's Online Module etc. | 02 |
| 5. | Custom Templates Explore the addition of creation and uses of customized Joomla templates Modifying templates using CSS and HTML tricks. | Select and Customize template for website. | 02 |
| 6. | User management and permissions Explore how to manage users in Joomla site, including managing who sees what based on login, as well as who can do what based on permissions assigned. | Control the use of Captcha, registration allowed and type of registration, default user group new users, reset password, and new user registration email notice to administration. | 02 |

IT Infrastructure Management Practices

COURSE DESCRIPTION:

IT infrastructure consists of a set of physical devices and software applications that are required to operate the entire enterprise. IT infrastructure is also consists both human and technical capabilities. These services include the following- Computing platforms used to provide computing services, that connect employees, customers, and suppliers into a coherent digital environment, including servers ,Data management services that store and manage corporate data and provide capabilities for analyzing the data and Application software services that provide enterprise-wide capabilities such as enterprise resource planning, customer relationship management, supply chain management, and knowledge management systems that are shared by all business units. It allows an organization to deliver IT solutions and services to its employees, partners and/or customers and is usually internal to an organization and deployed within owned facilities.

OBJECTIVES

- Acquire comprehensive knowledge, technical expertise and hands-on experience in IT Infrastructure Management
- To learn all aspects of IMS such as Networking, Operating Systems, Virtualizations and Data Center technologies.

LAB REQUIREMENTS:

- A modern web-browser with HTML5 and JavaScript enabled.
- Remote Desktop Client connection software.
- Internet connectivity Microsoft Account (LiveID).

Theme: "Mini project Using Java"

Java is one of the fundamental programming languages that can be used in many applications as well as product developments. The simple reason for this is because Java can be put to use in various platforms due to its multi-platform nature. Java is one of the favorite choices for developers for many reasons like security, object oriented(reusability), cross platform computing, multithreaded capability, Rich API, Powerful development tools ,availability of various frameworks, Great collection of open source libraries, wonderful community support, Excellent documentation support. Support for various databases and many more.

Students can use the following tools in web and mobile applications as well as product developments:

2 Struts, Spring, Hibernate and JPA
2 JAXB and Apache Axis 2/Java
2 JSP, Servlets, JDBC, EJB, JMS, JTA and JUnit
2 Apache Tomcat, JBoss and GlassFish
2 JavaScript, JSF, GWT and jQuery
2 Eclipse, Netbeans and JBoss tools
2 TestNG

☑ jBPM and Drools☑ JCR

Objectives:

Help students to utilize and strengthen the knowledge of java which they have learnt in previous semester.

Methodology:

Students are asked to make a team of 3-4 members and can choose the different categories of projects like desktop applications, web applications, mobile application and distributed application and work once it is approved by the coordinator.

Assessment:

Students Assessment through CIE (80%) + SEE (20%)

| Continuous | Assessment | Marks | | |
|--------------|--|--------|--|--|
| Internal | | | | |
| Evaluation | Evaluation Problem Definition, Literature Review | | | |

| Examination | Viva-voce | 10 | | |
| | Tot | al 100 | | |

1.1 Course Objectives:

The Mini Project being part of the course work is not only a mechanism to demonstrate the abilities and specialization but also provides the opportunity to demonstrate originality, teamwork, inspiration, planning and organization in a software project. One can put into practice the techniques that have been taught throughout the previous courses. Mini-projects develop practical skills in students. The idea is to propose a problem that one might encounter in future career (be it in academia, industry, or government). Then propose a solution and implement it.

Theme: Java Based E-Commerce Applications with Multilingual Support

E-commerce Objectives:

| KLE TECH. KLE TECH. | |

| Department of Master of Computer Applications | Page of Page 44 of 97 |
| Content- Unique courses by 2015 to 2020 batches (Removed Duplicate by Couse Code) | Year: 2015-20 batches |

Most business houses are shifting their operations to the online world. Right from buying apparels to computers to booking tickets and renting out apartments, everything can be done through the Internet now. It is a win-win formula for both the customers and the business houses. Digital India aims to boost E-business and the E-commerce industry with the vision that it would in turn boost the economy is a whole.

Multilingual Objectives:

Language is an essential driver of enterprise growth. The user interface is the key component of any application that needs to support various language speaking audiences. Making an app that appeals to and is available for more users broadens the market and brings more revenue in the app sales and there will be more exposure to the business.

Evaluation:

• The project assessment is done by an evaluation team as per the schedule. Guidelines for In Semester Assessment (ISA) Scheme

| Phase wise distribution of marks | Marks |
|---|-------|
| Identification and defining the problem | 15 |
| Software Requirement Specification | 20 |
| Software Design | 15 |
| Mid–way Implementation | 10 |
| Final Demo and Report Submission | 20 |
| Total | 80 |

End Semester Assessment (ESA):

There will be a final presentation /demonstration//viva-voce at the end of the semester for 20 Marks

Linux Administration Practices

COURSE DESCRIPTION:

IT infrastructure consists of a set of physical devices and software applications that are required to operate the entire enterprise. IT infrastructure is also consists both human and technical capabilities. These services include the following- Computing platforms used to provide computing services, that connect employees, customers, and suppliers into a coherent digital environment, including servers ,Data management services that store and manage corporate data and provide capabilities for analyzing the data and Application software services that provide enterprise-wide capabilities such as enterprise resource planning, customer relationship management, supply chain management, and knowledge management systems that are shared by all business units. It allows an organization to deliver IT solutions and services to its employees, partners and/or customers and is usually internal to an organization and deployed within owned facilities.

OBJECTIVES

- Acquire comprehensive knowledge, technical expertise and hands-on experience in IT Infrastructure Management
- To learn all aspects of IMS such as Networking, Operating Systems, Virtualizations and Data Center technologies.

LAB REQUIREMENTS:

- $\circ~$ A modern web-browser with HTML5 and JavaScript enabled.
- Remote Desktop Client connection software.
- Internet connectivity Microsoft Account (LiveID).

LIST OF EXERCISES

Creating Value Leveraging Knowledge

Department of Master of Computer Applications

Content- Unique courses by 2015 to 2020 batches (Removed Duplicate by Couse Code)

Year: 2015-20 batches

| Expt./ Job No. | Lab assignments/experiment | Implementation | Number of Slots |
|----------------------|--|--|--------------------|
| 8. | Web Server | Apache Web Server, IIS Server: Install and Configure the Apache Web Server on Linux and IIS server on windows. | 01 |
| 9. | Samba Server | Implementation of Windows files and print services for Linux allowing the sharing of files and printers between Windows and Linux. | 01 |
| 10. | LDAP Server | LDAP Server: Lightweight Directory Access Protocol- Server Installation to access a directory service. | 01 |
| 11. | Mail Server | Mail Server configuration- POP3 Server, IMAP Server | 01 |
| 12. | Proxy Server | Develop a small web proxy server, which is able to cache web pages. It is a very simple proxy server which only understands simple GET-requests, but is able to handle all kinds of objects - not just HTML pages, but also images. | 01 |
| 13. | Firewalls and NAT (Network Address Translation) | Use of iptables to build a permissive firewall by selectively filtering packets based on protocol type. To demonstrate how addresses may be translated from private addresses to public and vice versa as they pass in and out of the firewall. | 01 |
| 14. | Cloud Infrastructure: Azure Hands-on Lab (HOL) Build your Infrastructure in the Cloud using Windows Azure Infrastructure Services - | 6. Login to the Windows Azure Management Portal, Define a new Windows Azure Affinity Group and Create a new Windows Azure Storage Account. 7. Register a DNS Server in Windows Azure. 8. Define a Virtual Network in Windows Azure. 9. Configure Windows Server Active Directory in a Windows Azure VM. 10. Configure New Machine for File | 01 |

Mobile Application Development Course Project

Objective:

This is the course Project for the Mobile App Development. The students will be divided into project teams, and each team will develop a marketable mobile app. ideally, each project team will have 2 or 3 students with a maximum of 4. The goals are to expose students to the process of developing a new mobile app from start to finish and to provide an experience very similar to what a developer would have at any company where they work to produce an app that not only works but is also something that meets the needs of their clients.

Concepts:

Mobile app development, project management, and quality assurance.

Required Textbooks

AnubhavPradhan, Anil V Deshpande, Composing Mobile Apps using Android, 2010 wiley, 2010.

| Chapters | Торіс | Course Project | Slots |
|---|--|--|-------|
| Ch-01: Mobility and Android. Ch-02: Getting Started with Android. Ch-03: Learning with an Application. | Mobility Panorama, App Development Approaches, Setting Development Environment, Installing and Running App Devices, Mobile App Development Challenges. | Development of logical Architecture for given Mobile Application. | 2 |
| Ch-04: App User Interface. Ch-05: App Functionality. | Activity, UI Resources, UI Elements and Events, Threads, AsyncTask, Notification, Broadcast Receivers | Building User Interface for given Application. | 2 |

| Ch-06: App Data – | Flat Files, Shared Preferences, Relational | Exchanging a Data | 2 |
|-------------------|--|----------------------|---|
| Persistence and | Data, Data Sharing Across Apps. | with in Enterprise | |
| Access. | | Application. | |

- 2. Christopher Bishop.Pattern Recognition and Machine Learning. 2e.

References:

1. Introduction to machine learning with python by Andreas C.Miiller and Sarah Guide

Machine Learning Practices Using Python

- Implement linear regression with one variable to predict profits for a food truck. Suppose you are the CEO of a restaurant franchise and are considering different cities for opening a new outlet. The chain already has trucks in various cities and you have data for profits and populations from the cities.
- 2) Build a logistic regression model to predict whether a student gets admitted to a university. Suppose that you are the administrator of a university department and you want to determine each applicant's chance of admission based on their results on two exams.
- 3) Implement one-vs-all logistic regression and neural networks to automate handwritten digit recognition (0 to 9)
- 4) Implement the backpropagation algorithm for neural networks and apply it to task of hand –written digit recognition.
- 5) Build a Spam Classifier using Support Vector Machines.
- 6) Implement the K-means clustering algorithm and apply it to compress an image.
- 7) Build Principle Component analysis to find a low dimensional representation of face images.
- 8) Implement the anomaly detection algorithm and apply it to detect failing servers on a network.
- 9) Build a recommender system for movies by using collaborative filtering.

Theme: "Development of Applications using .NET/ JavaTechnology"

.NET Technology

The Microsoft .NET framework has major advantages over previous programming languages and environments. Applications written in .NET may be in any of several different programming languages (languageinteroperability). .NET consists of a re-useable library of classes (smallcomponents that help developers create applications). It also consists of a development environment to help developers rapidly and graphically build applications. All operating system functions can be encapsulated within .NET.The framework manages the execution of applications and Web services, and provides many functionalities including security enforcement and memory management. Because of these advantages, corporations and industry are beginning to embrace .NET. They will need graduates whoknow how to use it.Hence, a project done using this technology would give an insight of the powerful features of .NET and help the students to find a job in this field. Below is a list of some of the types of applications that can be created using the .NET platform.

- Customer relationship management
- Accounting applications
- Product/inventory applications
- Warehousing applications using hand-held devices
- Web sites
- Value chain/supply management
- Integration with partners through the Internet
- XML Web services
- PDA (hand-held) applications

Objectives of using .NET Technology-

Student doing a project in .NET technology should be able to:

| KLE TECH. KLE TECH. Creating Value Leveraging Knowledge | |
|---|-----------------------|
| Department of Master of Computer Applications | Page of Page 59 of 97 |
| Content- Unique courses by 2015 to 2020 batches (Removed Duplicate by Couse Code) | Year: 2015-20 batches |

- 1. Develop an application that is pure OOP, platform independent, language independent and interoperable.
- 2. Use the features of .NET to make the application scalable, maintainable, easily deployable, reliable and secure.
- 3. Work with databases using ADO.NET.
- 4. Develop background processes windows services.
- 5. Create animations using .NET's WPF.
- 6. Create and use Web Services through SOA.

Java Technology

Java is one of the fundamental programming languages that can be used in many applications as well as product developments. The simple reason for this is because Java can be put to use in various platforms due to its multi-platform nature. Java is one of the favorite choices for developers for many reasons like security, object oriented(reusability), cross platform computing, multithreaded capability, Rich API, Powerful development tools ,availability of various frameworks, Great collection of open source libraries, wonderful community support, Excellent documentation support. Support for various databases and many more.

Students can use the following tools in web and mobile applications as well as product developments:

Struts, Spring, Hibernate and JPA
JAXB and Apache Axis 2/Java
JSP, Servlets, JDBC, EJB, JMS, JTA and JUnit
Apache Tomcat, JBoss and GlassFish
JavaScript, JSF, GWT and jQuery
Eclipse, Netbeans and JBoss tools
TestNG
JBPM and Drools
JCR

Objectives:

Help students to utilize and strengthen the knowledge of Java which they have learnt in previous semester.

Methodology:

Students are asked to make a team of 3-4 members and can choose the different categories of projects like desktop applications, web applications, mobile application and distributed application and work once it is approved by the coordinator.

Evaluation:

Students Assessment through CIE (80%) + SEE (20%)

Theme: "Development of Rich Internet Applications using PHP"

Rich Internet Applications (RIAs) are web applications that offer the responsiveness, "rich" features and functionality approaching that of desktop applications. This course provides an end-to-end look at building Rich Internet Applications that employ HTML5, Ajax, jQuery, etc. This course provides platform for integrating various server-side and client-side technologies to create a robust applications.

Purpose:

- Developing rich reporting and analytics interfaces for enterprise-level information presentation.
- To build state-of-the-art web applications utilizing the powerful features provided by the combination of the PHP language, Ajax, and Web Services.
- To provide an authoritative overview to a set of key technologies for building web applications (HTML, HTML5, JavaScript, Dynamic HTML, CSS, ASP, AJAX, and XML).
- Able to apply the above key technologies for developing light-weighted and rich-content Web
 applications
- To offer users a better visual experience and more interactivity than traditional browser applications that use only HTML and HTTP.
- To create advanced user interfaces.

Theme: "Mini project Using Java/Python"

Java is one of the fundamental programming languages that can be used in many applications as well as product developments. The simple reason for this is because Java can be put to use in various platforms due to its multi-platform nature. Java is one of the favorite choices for developers for many reasons like security, object oriented(reusability), cross platform computing, multithreaded capability, Rich API, Powerful development tools ,availability of various frameworks, Great collection of open source libraries, wonderful community support, Excellent documentation support. Support for various databases and many more.

Students can use the following tools in web and mobile applications as well as product developments:

- Struts, Spring, Hibernate and JPA
- JAXB and Apache Axis 2/Java
- JSP, Servlets, JDBC, EJB, JMS, JTA and JUnit
- Apache Tomcat, JBoss and GlassFish
- JavaScript, JSF, GWT and jQuery
- Eclipse, Netbeans and JBoss tools
- TestNG
- jBPM and Drools
- JCR

Objectives:

Help students to utilize and strengthen the knowledge of java which they have learnt in previous semester.

Python :

Python is an interpreted, high-level, general-purpose programming language. Python has a design philosophy that emphasizes code readability, notably using significant whitespace. It provides constructs

that enable clear programming on both small and large scales, Python features a dynamic type system and automatic memory management. It supports multiple programming paradigms, including objectoriented, imperative, functional and procedural. It also has a comprehensive standard library. Python interpreters are available for many operating systems. CPython, the reference implementation of Python, is open source software and has a community-based development model.

Students can use the following tools in web and product developments:

- Django
- BootStarp
- Matplotlib
- Reportlab
- Numpy
- Pandas
- Falcon

Objectives:

Help students to utilize and strengthen the knowledge of python which they have learnt in previous semester.

Methodology:

Students are asked to make a team of 3-4 members and can choose the different categories of projects like desktop applications, web applications, mobile application and distributed application and work once it is approved by the coordinator.

| SI.No | User Interface Design Practices Activity | Hours |
|-------|---|-------|
| 1 | Find two examples of user interfaces (might be desktop software, web applications, | 2 |
| | smartphone apps, consumer devices, car dashboards, building entrances, traffic | |
| | intersections, shower controls, etc), one that you consider a good design and one that | |
| | you consider a bad design. For each interface, you should: | |
| | Describe its purpose intended users. | |
| | • Analyze its good and bad points of usability with reference to all the | |
| | dimensions of usability (learnability, visibility, efficiency, errors) Illustrate your analysis with appropriate screenshots or photographs. | |
| 2 | Design a user interface for a specific task that communicates its conceptual model to | 2 |
| | the user more effectively, so that users are less likely to make this mistake. Sketch | |
| 3 | your ideas (alternate designs) on a whiteboard. Critique it, and update the designs. Guided by the categories below, make a list of what needs to be made visible, and | 2 |
| 0 | then brainstorm (and sketch) how the interface might make it visible. | 2 |
| | | |
| | Actions: what can the user do? | |
| | State: what is the current state of the system? South a strength of the system of the syst | |
| 4 | Feedback: what was the effect of the user's actions Evaluate the undermodels used in single user text aditing. Chaose a few different | 2 |
| 4 | Explore the undo models used in single-user text editing. Choose a few different kinds of textboxes. Experiment with a web browser's undo model for text editing by | 2 |
| | typing, deleting, changing properties, and using Undo. Try to figure out: | |
| | | |
| | How many undo streams are there—one, or many? | |
| | How is the history divided into undoable units? | |
| | How much previous state is recovered when you undo? (Selections? cursor positions?) | |
| | What visible feedback does Undo give? (e.g., if the Undo affects a location | |
| | scrolled out of the box?) | |
| 5 | User-centered design process, by conducting a lightweight UCD process on a few | 2 |
| | problems in the classroom. | |
| 6 | User Analysis, Task Analysis, Domain Analysis by observing a real environment of | 2 |
| | people working. | |
| 7 | | 0 |
| 7 | Designing UIs by sketching. | 2 |
| 8 | Exploring some of the main structuring patterns of GUI software: the view tree, | 2 |
| | listeners, and model-view-controller using HTML, Javascript, and jQuery, along with | |
| | a handy online HTML editor. | |
| 9 | Explore about low-fidelity prototyping by creating a simple, hand-drawn prototype | 2 |
| | in less than 5 minutes, and simulating it with another user. | |

DIP Practices using Python

COURSE DESCRIPTION:

Computer vision is the automated extraction of information from images. Information can mean anything from 3D models, camera position, object detection and recognition to grouping and searching image content. This course provide hands-on programming practices and introduces basic tools for working with images using python OpenCV library.

OBJECTIVES

- To provide hands-on programming with images using Python.
- o To demonstrate computer vision techniques behind a wide variety of real-world applications.
- To implement many of the fundamental algorithms using OpenCV library.

LAB REQUIREMENTS:

- o Computer with latest configuration having Windows and Linux OS Versions.
- Python with OpenCV Library installed.

| Assessment | Marks |
|------------|-------|
| ISA- 1 | 20 |
| ISA- 2 | 20 |
| Assignment | 10 |
| Total | 50 |

End Semester Assessment (ESA)

| UNIT | 8 Questions to be set of 20 Marks Each | Chapter Nos. | Instructions |
|------|--|--------------|------------------------------------|
| I | 3 Questions to be set of 20 Marks Each | 1, 2, 3, 4, | Any 2 questions are to be answered |
| II | 3 Questions to be set of 20 Marks Each | 5, 6, 7, 8, | Any 2 questions are to be answered |
| 111 | 2 Questions to be set of 20 Marks Each | 9, 10 | Any 1 question is to be answered |

DevOps Practice Exercise:

The objectives of these practice exercise is to learn DevOps best practices and to define entire infrastructure as code and learn about infrastructure as code, continuous integration, continuous delivery, Terraform, AWS, Packer, Docker, and much more.

- 1) **DevOps basics:** Learn the origins of DevOps and the basic principles and techniques.
- 2) AWS crash course: Hands-on session where you learn to use the most important AWS services, including IAM, EC2, ASG, EBS, ELB, S3, and RDS.
- **3)** Infrastructure as code: Overview of different techniques to manage infrastructure, including ad-hoc scripts (e.g., Bash, Python), configuration management tools (e.g., Chef, Puppet), machine images (e.g., VMs, Docker), and provisioning tools (e.g., Terraform, CloudFormation).

| KLE TECH. KLE TECH. KLE TECH. Creating Value Leveraging Knowledge | |

| Department of Master of Computer Applications | Page of Page 84 of 97 |
| Content- Unique courses by 2015 to 2020 batches (Removed Duplicate by Couse Code) | Year: 2015-20 batches |

- **4) Terraform introduction**: Go through a series of coding exercises that cover the basic Terraform syntax, state management, loops, conditionals, lifecycle management, and common gotchas.
- **5)** Advanced Terraform: Go through a series of coding exercises that cover Terraform modules, file layout, keeping code DRY, team workflows, and automated testing.
- 6) Immutable infrastructure: Overview of immutable infrastructure practices, versioning artifacts, promoting artifacts through environments, and deployment.
- 7) Packer introduction: Build your own AMIs and other virtual machine images using Packer.
- 8) Docker introduction: Create your own Docker images and deploy them using Docker orchestration tools.
- **9) Continuous delivery**: Learn how to integrate Terraform, Packer, and Docker into a continuous delivery pipeline.
- **10) DevOps best practices**: Learn about continuous integration, microservices, feature toggles, canary deployments, monitoring, alerting, and log aggregation.
- **11) Production readiness review:** A Gruntwork engineer goes through a checklist of questions with your team to see what work you need to do to be ready for prod.
- **12)** Architecture deployment: Deploy your customized Reference Architecture in AWS.
- **13)** Architecture walkthrough: Overview of how the architecture works and how to use it.
- **14) Migrating to the new architecture:** Learn the process of migrating your apps and data to the new architecture.

| Theme: " | Development | of Applications using .NET/ Java Technolo | gy" | | |
| .NET Tech | nology | | | | |

The Microsoft .NET framework has major advantages over previous programming languages and environments. Applications written in .NET may be in any of several different programming languages (language interoperability). .NET consists of a re-useable library of classes (small components that help developers create applications). It also consists of a development environment to help developers rapidly and graphically build applications. All operating system functions can be encapsulated within

| KLE TECH. KLE TECH. KLE TECH. Creating Value Leveraging Knowledge | |

| Department of Master of Computer Applications | Page of Page 89 of 97 |
| Content- Unique courses by 2015 to 2020 batches (Removed Duplicate by Couse Code) | Year: 2015-20 batches |

.NET. The framework manages the execution of applications and Web services, and provides many functionalities including security enforcement and memory management. Because of these advantages, corporations and industry are beginning to embrace .NET. They will need graduates who know how to use it. Hence, a project done using this technology would give an insight of the powerful features of .NET and help the students to find a job in this field. Below is a list of some of the types of applications that can be created using the .NET platform.

- Customer relationship management
- Accounting applications
- Product/inventory applications
- Warehousing applications using hand-held devices
- Web sites
- Value chain/supply management
- Integration with partners through the Internet
- XML Web services
- PDA (hand-held) applications

Objectives of using .NET Technology-

Student doing a project in .NET technology should be able to:

- 7. Develop an application that is pure OOP, platform independent, language independent and interoperable.
- 8. Use the features of .NET to make the application scalable, maintainable, easily deployable, reliable and secure.
- 9. Work with databases using ADO.NET.
- 10. Develop background processes windows services.
- 11. Create animations using .NET's WPF.
- 12. Create and use Web Services through SOA.

Java Technology

Java is one of the fundamental programming languages that can be used in many applications as well as product developments. The simple reason for this is because Java can be put to use in various platforms due to its multi-platform nature. Java is one of the favorite choices for developers for many reasons like security, object oriented(reusability), cross platform computing, multithreaded capability, Rich API, Powerful development tools ,availability of various frameworks, Great collection of open source libraries, wonderful community support, Excellent documentation support. Support for various databases and many more.

Students can use the following tools in web and mobile applications as well as product developments:

Istruts, Spring, Hibernate and JPA
JAXB and Apache Axis 2/Java
JSP, Servlets, JDBC, EJB, JMS, JTA and JUnit
Apache Tomcat, JBoss and GlassFish
JavaScript, JSF, GWT and jQuery
Eclipse, Netbeans and JBoss tools

☑TestNG

☑jBPM and Drools

🛛 JCR

Objectives:

Help students to utilize and strengthen the knowledge of Java which they have learnt in

previous semester.

Methodology:

Students are asked to make a team of 3-4 members and can choose the different categories of projects like desktop applications, web applications, mobile application and distributed application and work once it is approved by the coordinator.

Evaluation:

1. Hands-On RESTful Python Web Services: Develop RESTful web services or APIs ... By Gaston C. Hillar

Evaluation Scheme

In Semester Assessment (ISA)

| Assessment | Marks |
|------------|-------|
| ISA- 1 | 20 |
| ISA- 2 | 20 |
| Assignment | 10 |
| Total | 50 |

End Semester Assessment (ESA)

| UNIT | 8 Questions to be set of 20 Marks Each | Chapter Nos. | Instructions |
|------|--|---------------|------------------------------------|
| I | 3 Questions to be set of 20 Marks Each | 1, 2, 3, 4, 5 | Any 2 questions are to be answered |
| II | 3 Questions to be set of 20 Marks Each | 6, 7, 8, 9,10 | Any 2 questions are to be answered |
| III | 2 Questions to be set of 20 Marks Each | 11, 12 | Any 1 question is to be answered |

RESTFull Web Services

SI NO Topics

- 1. Working on XML-RPC and SOAP Protocol
- 2. Working on Web Service Client using httplib2 python library
- 3. Understanding of CURL command and its options
- 4. Implementation of XML and JSON Parsing using Python
- 5. Working on client application to store and retrive the data using S3 Bucket
- 6. Implementation of RESTfull services for data request and response
- 7. Working on Authentication and Authorization for RESTfull services
- 8. Implementation of RESTfull services for data and serialization formats, Database connectivity
- 9. Integration of AJAX and REST Clients
