Effectiveness of the workshop

A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as servers. The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so. Learning should not stop even during difficult times. In order to facilitate a real time experience of sysadmin, a workshop on “System administrator” was held for the students online of third semester of computer science department during the year 2020-21.

Outcomes of workshop

- Students were exposed to the basic idea of who exactly is system admin.
- Students were able to understand the job of a system admin and even the future scope of sysadmin.
- Students were exposed to the advantages of working as a sysadmin and the skills required for this job.
